Thread: ["System Data" taking up half of my phone's memory](#)

A Powerade - March 17, 2016, 5:10 pm

So since I updated my phone, there seems to be a mysterious 3-4GB of "System Data" on my phone's hard drive that I can't get rid of.

Screenshot of this [\(Click to View\)](#)

I have an LG Leon running Android version 5.1.1

Is this a known issue with updating Android or is this a new thing?

Did you try factory resetting it?

If i were you i would try and root the phone and go back to the older lollipop

abdel - March 20, 2016, 2:07 pm

If you go into recovery and clear cach and delvic (sry for bad spelling) that should fix it

In android it's normal....If you use the system for a long time it creates many, many files for the system working faster. Also not all apps are uninstalled fully. Is your phone "rooted"?

Nope, not rooted.
