Thread: [RedHat Linux {YUM INSTALL PROBLEM}](#)

Gun94 - March 17, 2016, 7:22 pm

Hi,

I am trying to install yum to my redhat server but get the following error

```
Code [root@localhost ~]# cd /tmp/
[root@localhost tmp]# mkdir test
[root@localhost tmp]# cd test
[root@localhost test]# yum install yum-utils
Loaded plugins: product-id, subscription-manager
This system is not registered to Red Hat Subscription Management. You can use
subscription-manager to register.
Setting up Install Process
No package yum-utils available.
Error: Nothing to do
[root@localhost test]#
I am not sure its due to a misconfiguration within my network as i am also not able to ping my
server ip
```

```
Code [*****@gsystem-svr-***** ~]$ ping *.*.*.*
PING *.*.*.* (*.*.*.*) 56(84) bytes of data.
From *.*.*.* icmp_seq=2 Destination Host Unreachable
From *.*.*.* icmp_seq=3 Destination Host Unreachable
From *.*.*.* icmp_seq=4 Destination Host Unreachable
^Z
[1]+  Stopped                  ping *.*.*.*
[*****@gsystem-svr-***** ~]$
New to linux so not 100% sure on what the error is and have tried to google/youtube trouble
shooting but nothing. thanks
```

Are you using the enterprise version? If so is it cracked or legit.

Gun94 - March 17, 2016, 7:25 pm

Its for a CSCI class I have...

Professor created server for us and i am connecting to the console via a [MobaTerm]] don't think its a enterprise version

BUMP

Still looking for help on this if possible

ActavisCocaineNinja - March 17, 2016, 10:12 pm

Perhaps you should try what the error message tells you to do.

"This system is not registered to Red Hat Subscription Management. You can use

subscription-manager to register."

Did you try running subscription-manager?

also AFAIK

RedHat uses RPM has the primary package manager now.

ISSUE RESOLVED

I had to go into my yum config file via the vi and set it to enable instead of disable and change the url link to the file. Thanks everyone!
