Thread: [Remove Synthetica Look and Feel watermark & license warning](#)

Weco - March 18, 2016, 4:21 pm

Step 1:

Register an Account at: <http://www.javasoft.de/>

Step 2:

Download the newest version of the Evaluation Copy: <http://www.javasoft.de/synthetica/download/>

Step 3:

Download reJ: <http://sourceforge.net/projects/rejava/files/latest/download?source=files>

Step 4:

Start it and click open and select the synthetica.jar File.

Step 5:

Navigate to de/javasoft/plaf/synthetica and open the SyntheticaPlaneUI.class file with a double click.

Step 6:

Click Edit -> Find... and type "isEvalCopy"

Step 7:

Follow the steps in the gif image.

(Right click on "iconst_1 1", select "Insert after...", select iconst_0, click "Ok", Right click on "iconst_1 1", Select "Remove")

Step 8 (Ignore if you already have a Search Tab):

"Click View -> Search" two times.

Step 9:

Open the Search Tab, choose Case-insensitive and enter: "<html>It looks like", click search, double click the found result

Step 10:

Follow the steps in the gif image.

(Select everything between the the two brackets {} except "return", click remove)

Step 11:

Save.

Step 12:

You can now use the library without the watermark and the license popup. You can now download themes from <http://www.javasoft.de/synthetica/themes/> and use them in your project. Enjoy.

Please tell me if I made some typos. Thanks for reading.

Amazing guide, thank you Weco.

0x42434e - March 18, 2016, 6:54 pm

Sexy guide very nice job. Love a bit of RE'ing :).

(Apr 4, 2016 06:40 AM)Weco Wrote: [\[CITE\]](#) Thanks. The Guide is still working fine! I think it can help a lot and you can easily make some funds out of it.

Weco - April 15, 2016, 4:37 pm

This guide is still working!

Jire - April 15, 2016, 10:41 pm

Nice job! I'm surprised they didn't even obfuscate names. Alternatively to using reJ, you can do the same at runtime using Javassist or ASM.

This guide is still working!

Captain Steve Rogers - May 3, 2016, 11:19 pm

Lol that was too easy, seems like Javasoft has to work hard on their product.

Weco - August 23, 2016, 8:18 am

This guide is still working fine.

Doug Dimmadome - August 28, 2016, 10:02 am

I'm not trying to bash this in any way, but do people still use Swing? I and just about every company I've been working for has migrated to JavaFX & FXML. Has anyone here used JavaFX yet and still using Swing? If so, why?

Mysticalcx - September 10, 2016, 12:00 pm

Thanks for this will come in handy for sure

My College still uses Swing, Just because of outdated syllabus.

Thanks for the guide, it's very useful!

An other question: can't we just remove the whole thing from the bottom of the frame? Cause if i set it to null ("UIManager.put("Synthetica.rootPane.borderText", null);"), it's just turn into gray, but it's still there. The documentation sais it won't disappear in the trial version: "A single line of text which will be displayed at the bottom of each window - value 'null' means not visible. Optional value - default is null. Since V2.18.0. Note: The feature does not work with the evaluation copy or when the native frame decoration is enabled."

Weco - January 29, 2017, 8:46 am

This guide is still working!

TCP - January 29, 2017, 11:46 am

This is a very nice tutorial with easy steps
