I think that you don't need a keylogger since you will have installed a rat on the victims computer.

I don't have any clean RAT download link, but I would advise you to buy one if you want to do good work.

Ratty is a good one, just google search "ratty hacking tool +hackforums.net". the tag +hackforums.net makes it target hackforums.net

If you want to specify results from only HF it would be

Code site:hackforums.net Ratty hacking tool
