Thread: [Skryptec's Skype Tool \[RELEASE 1.3\] Skype Crasher, Avatar Grabber & More!](#)

Slachter - March 19, 2016, 1:14 pm

Auto-update is temporary not working because of too many traffic coming to my downloads!
Hello everyone,

So finally after a few hours work and experimenting, I have finished my Skype tool!
It has been designed for TeamS, but has been released publicly.
The Skype tool has many features and there are a lot of features still being added!
The tool has also a check for updates button, so you can always stay up to date! :)

Screenshots:

Make sure to leave both .dll's in the same folder as the .exe otherwise it will NOT work!

Enjoy and have fun! <3

Much love,

- Skryptec

Does the IP Resolver actually work?

No offense OP but your site is just... Ew.

1. You don't have a re-write rule to get rid of the .html which is just unprofessional.
2. You're using free hosting and it will redirect to their host instead of the homepage if you go to an invalid link.
3. Your "Blog.html" page just has copied and pasted news reports.
4. XSS vulnerabilities are almost completely useless unless you actually know what you're doing.

Idiot.

There's hundreds of skype tools out. This is nothing special. I can go on youtube and find 20 that have everything here and more.

How dare me voice my opinion.

The tool is pretty good, I like how I can just spam being online and offline ?

I've also never had a working avatar grabber, so thank you for that as well ?

I could of sworn Microsoft patched outgoing connections i.e: Skype Resolvers and other methods of sniffing IP addresses around a month back in their latest update version of Skype?

Nice job and is the crasher meant to crash the other user or myself? Seems to be just crashing me. Also for the .dll files just use ILMerge.
