Thread: [Bootstrap Alerts](#)

VmX5 - March 19, 2016, 6:11 pm

I'm very bored and I decided to recreate Bootstrap's Alerts with .NET GDI. It's quite simple to make but I thought I'd release something.

You may change the Title and text of each alert.

You may set the "AlertType" Property to switch between Success, Info, Danger, and Warning.

This is the alert I recreated in .NET .

This is the original Bootstrap alerts.

I used tusharthegreat's [Perfect Rounded Rectangle](#) tutorial to create the round edges.

Source

[Vb](#) | [C#](#)

C# version was translated via Telerik's online translator so some parts might be broken in the C# version.

1. Remove random spaces.
2. Follow naming conventions.
3. Split up variables (no disgusting one liners).
3. Split your code up.
4. Make use of the constructor and use it to declare default variables.

Thanks for the tips, I'll be sure to remember them the next time I code! :D

Reminds me of my old Bonfire theme.

Those icons are in poor taste, really don't go with the theme.

:c

:c

Meh, idc. It was just to show that the buttons supported images.
