warning: do not download the software OP told you to download.

when you open it, it looks fine, but behind the scenes it creates several malwares in your system. not sure what they do exactly but my antivirus prevented for any damage that may be caused.

the program that OP told you to setup, can be done on their site too, without having to download the program. i don't understand why would you download the program if you can do the same thing on the website.

virustotal.com dump information about the program exe OP told you to download:
