Hello everyone, ?

a.pomf.cat/qgwwtw.rar (This is the source code of ises)

i been wanted to test this, and i'm going to code my own code but for now my knowledge about coding is bad :/ (also my english is bad), and i wanted to see how this cheat works and stuff but i have some problems .. i just complie the code and run it with an injector and i got this problem: gyazo.com/1934b5e42b4b78854f2f6e70daefdee9 (if you didnt get it what's the problem, the menu is showing just the name of the cheat and that's all) some help would be appreciated.

Thanks in advance.

Then you know, any other open source cheat that might help me?

I want to test features and look at their code, like live if you know what i mean.

(i can buy a cheat from a p2c provider or i can download a free one to test it but i dont have access to their source code, and if i have access to the source i can understand easily.)

look around for ayyware source, it's probably detected, but at least the code is tidy, and not pasted.

ISES/Ayyware both shit cheats lol don't trust a soul, go on MPGH and look at the sources there, or UnknownCheats.me that shit will be much better than the skiddy cheats mentioned here

Hello again i found the problem runing some random dll for testing, but i cant get to fix it. :/

gyazo.com/3f977104a504ecd971c036df8b489b85

(the drawing of the cheat is not the problem(cuz if i move the menu i can see more but it doesnt help). it has to do with my pc but i dont know what it is (i try to change my resolution and my video setting = nothing) i look on the internet i found nothing)

Any ideas ? any help will be appreciated
