How does the rotator work? Do I set my app to use proxy at say 127.0.0.1:46798 and then this app

of yours will use a random one?

Cecilia - March 23, 2016, 6:45 pm

Great coder, so I expect this will work flawlessly. I'm quite pleased with the professional UI too :)

You can either import your own proxy list, or generate one using the scraper or free proxy lists that are included in the program.

Once you load proxies, check them. Once checked, you can begin rotation. You specify every X minutes, the program will set your computer's global proxy to one from the list.

Could it be updated to instead/as well as setting the global proxy, ProxEZ rotator can run as a local proxy forwarder?

i tested the tool and it works fine and simple to use
it deserves its price

I personally think the price is a bit too high for this product but other than that it does what it advertises, Vouch.

Meh, it's a decent price, not like those \$2 scrapers that you have to buy a checker for after.

debug - April 5, 2016, 5:37 pm

Let me know if you have any questions about the product. Still for sale!

Annoited - April 5, 2016, 5:43 pm

Looks like a working program, but yeah, pretty expensive for this type of program. There are plenty of free ones too where we can put our own sites to scrape from, and there are checkers etc.

Good luck with sales though if you decide to lower it! ?

Good luck.

debug - April 5, 2016, 6:04 pm

What do you think is a reasonable price point? I do not like like selling lifetime as I feel I'm cheating buyers if the time comes that I have to discontinue a product.

debug - April 10, 2016, 3:28 pm

Prices have been reduced by 66% This is now a SQUAD product.

Please note that the lifetime purchase option refers to the time-span of the product itself, not the lifespan of the life of the buyer.

Any questions feel free to hit me up!

Free proxy list server is currently down. Doing my best to get it back up tonight.

Changes coming soon in v1.0.0.1:

-Vastly improved performance accross the board.

-Greatly improved proxy scraper. Can now scrape IPs in non-IP:Port format (eg. IP<htmltags>Port)

Key feature coming soon. No ETA

Private proxies. I will have private proxies supplied in the program for purchase. Most likely it will be subscription based. Something like \$2/month/private proxy AND/OR \$X/month/private proxy list.

The details are still in the works, but it will be ironed out soon.

If you have any questions about the program, feel free to ask!

robbo25 - April 13, 2016, 3:49 pm

Got email and all sorted. I'll wait for the proxy list server to come back and try tomorrow

debug - April 14, 2016, 6:44 pm

Proxy server has been updated. Lists are currently scanning and checking.
