Thread: [How to send same e-mail to multiple recipients at once without them knowing?](#)

Mons - March 24, 2016, 4:09 am

I tested hotmail BBC, but doesn't seem to work.
Just shows all the BBC contact for recipient.

I need to send 1 e-mail to 100+ recipients at once.

BCC is the only option, hence it standing for Blind Carbon Copy. Try setting up your hotmail with Outlook and doing a test BCC send from there. Also, you don't have to put anything in to "To" box, just fill out BCC.

However, it is not recommendable to leave the "To" box open, considering mails sent with this box left open are occasionally flagged as spam.

Actually, that's a pretty good idea.

I could do that for you if you want. :P

Got nothing better to do right now.
