Thread: [\[TUTORIAL\] How to speed up your Computer!](#)

spooky hacker - March 24, 2016, 1:56 pm

hi im looking for a real blackhat to do me some kob

Xycon - March 24, 2016, 2:53 pm

To uninstall.

1. Never use windows uninstaller as its crap.

Get Revo Uninstaller or something, as this will also scan for leftover files and register entries and remove those as well.

To free ram.

Don't try and clean everything as you simply can not.

Part of it is in use by windows ect. after all making all those numbers flawed.

Cleaning PC, be carefull when touching these temp folders and even with CCleaner.
Removing the wrong folder may lead to loss of settings for programs ect.

Meh, this tutorial is so flawed

Thanks a lot. My computer has been running so slow.

Captain Steve Rogers - December 17, 2016, 12:40 am

I always keep windows up-to-date and use CCleaner + Wise registry cleaner.
