Thread: [How to rotate image in HTML](#)

Germany69420 - March 25, 2016, 9:11 am

So i am going to college next year and i applied for Software Developer. I really want to start learning programming. So i have to do some sort of small test and i need to make a basic HTML page with my info, hobbies and a picture of myself. I've all got it done except the image i provided is facing the wrong way. I need to rotate it 90 degrees. Does anyone know how to do this? I've checked google but i can't find a proper solution.

Thanks!

Oddissee - March 25, 2016, 9:12 am

You can't just use HTML.

You need to use jquery

Use CSS3 'transform' to do that, mate.

http://www.w3schools.com/cssref/css3_pr_transform.asp

http://www.w3schools.com/cssref/tryit.asp?filename=trycss3_transform

I'd suggest learning CSS in its entirety though, not just particular parts.
