Omegle Spreader

UPDATE: 12.02.2018:

I did a complete rework of my tool in the past days. The Omegle Spreader is now working again with basic features. Source code will be available again soon, after some code-cleanup is done. I am happy to announce some new features in the near future! Stay tuned!

Feel free to comment bugs/ideas below.

Information

Omegle Spreader is an open-source spreader without any costs or hidden in-app-purchases.

The main goal of Omegle Spreader is to serve a easy-to-use, free, fast and stable bot.

Avast found no problems with file. It looks it works. But I think it will not add much traffic or HQ buyers :) Anyways, good program! THanks for sharing.

After few messages it Omegle needs CAPTHA, unfortunately..

Shmebulock - March 28, 2016, 7:46 am

On my side I spreaded to over 2000 victims without any captcha. But i will add a captcha resolver soon.

Try to increase the ms delay a little bit.

After about 40 I needed captha. Now its 149 and need new. Maybe because I set 60ms. :)

Yes. I will add captcha detection. For me it worked to set 1000ms. It runs for many hours without interruption

Is the captcha shown when you use Omegle normally?

If not, figure out what's causing Omegle to suspect you're a bot and try to fix that.

It is because of fast text submits, when you use small timeouts/delays.

I will add deathbycaptcha support.

If you want to decrease the appearance of captchas just set the message-delay to something above 1000ms.

Mrs.Crystal - March 28, 2016, 9:17 am

Set it to 1024 ms and type like 2-3 messages instead of 1, and you will be alright for the rest of your life :D

Shmebulock - March 29, 2016, 10:43 am

New update available!

Changelog (1.1)

- + Added clear-statistics button
- + Added basic deathbycaptcha integration (not working yet)
- + bot will auto-reconnect if chat does not load for 10 seconds

1. Go to settings and add texts you want to write, by typing the text into the field and set the timeout.
2. Go to the overview tab and press start.
3. Go to the browser tab and watch what the bot is doing :)

Try to increase the timeout span, to something more than 500ms. The bot will run for a lot of hours then

username400 - April 6, 2016, 2:34 pm

Keep getting script errors, and unless I set it on 0ms it goes extremely slow for me. Ugh.

Weird though because when I first used it it ran great. Now it's being weird and I have to set delay to 0ms and still kinda slow. Tested on both computers too. Both worked awesome at first for about an hour. After a computer restart/program restart it starts doing that thing where I need to set it at 0ms. Even tried sandboxi ha.

I am going to message you on skype, willing to pay good money if you could fix this and add captcha support.

Hey username400.

I am currently not using skype. If you have any details/screenshots feel free to write a pm.

I don't know at the moment why your bot is working that weird.

Flaid - April 13, 2016, 12:08 pm

Hey! This bot is cool, I have a suggestion though. You should add a "save and load button" where the bot saves all settings and it's back on them when you restart it. A reset button would be useful too. And maybe the delay and messages should be editable with rightclick where you can enter a number or something.

xxdjunesxxd - April 13, 2016, 2:25 pm

Sweet man! I want to try this out!!
