Thread: [Need help from someone that knows haskell](#)

gatermann - March 28, 2016, 7:45 am

I need help with understanding some code from someone that knows haskell. Thanks!!!!!!!!!!!!!!

g4143 - March 28, 2016, 8:12 am

You could post the Haskell code.

You don't even remotely describe your problem though. You don't even have to post code, just describe whats happening or what you need accomplished.

Something like "I don't know how to interface with HTTPS in haskell, and I can't find a good library", or "I am getting this error, and here is the single line of code producing that error".

Also, I doubt your code is anything worth getting into a fuss about. Chances are that if you're asking here instead of stack overflow, it's been done.

I'm still learning beginner haskell, It's a school assignment.

I know it's a simple error but I really don't want to post assignment code online just in case :/

Ah, understood. So what's the error?

Sorry for being a little snippy, this place kind of gets you jaded after a while. My apologies
