Please upload and scan on virus total. Users beware

**Bo Burnham** - March 28, 2016, 3:57 pm

I didn't see the point of scanning it. The contents of the .rar is just two files that aren't useful and the SafariSetup for apple users.

Wow, such a good spammer you have here.

**coppedhype** - March 28, 2016, 4:04 pm

Obviously not going to work, but appreciate the effort.

You appreciate the time he put into adding a Safari setup into a .rar for all of us to "enjoy" while he claimed it was an email spammer? You fucking retarded piece of autism, you're getting a sexy neutral from me right now.

Don't be sorry, I should be! I am so sorry Mr post booster!

Do you have down syndrome? The download includes a setup for Safari, an application only

accessible to apple users, you actual spastic.

You appreciate LQ members and posts like this. Die, kid.

**Peeka** - March 28, 2016, 6:35 pm

Why not use Virus total to upload the virus scan.

You're scanning the site... not the file..

Holy fuck you're dumb.

Not upset, just pissed at how autistic you are.

I just thought nobody could be 100% ultra mode autistic and you just made me realise people can.

This seems that the thread went off topic.

The Email SPAM Generator is the index.html + style.css. Run it on Safari, Opera or Firefox...

**Andy Scott** - January 16, 2017, 10:23 am

I decided to make a little spam tool because why not.

Feel free to download and if you use it please comment it works! :D

@spidertrackurl

Your response comes very late. I have discontinued the development of Email SPAM Generator because the engines used by the browsers is becoming more restrictive...
