Thread: [I have FTP access, how do I get cPanel access?](#)

Matthew 6:33 - March 30, 2016, 10:36 pm

I have FTP access, how do I get cPanel access from this?

Is it possible. Any help would be great.

Thanks.

Ninetales. - March 30, 2016, 10:37 pm

I'm fairly sure you can backdoor the cPanel. I personally don't know how to do it, but I'm sure someone with the capacity can help you soon. (it could be as simple as not requiring the login cookie on the pages of the panel).

make html,php, javascript page that looks like cpanel login

Use htaccess to redirect the domain to the landing page you made

Use sendmail or something similar to have it send the details to you when they try to login. if you know the ip on the pc that logs into the cpanel or controls it, then you can fix the htaccess so it only redirects that pc/ip instead of all traffic.

this won't work well if you don't twist what I said. You have to take multiple things into account here.

Sounds like it should work. I'll give anything a try!

Anyone have any other ideas?

With FTP you don't need cpanel access just spawn a shell go to the cpanel directory and look for config files or something you can do most likely whatever you need with shell access.
