Thread: [Cool Dox Method | ISP | IP Required | Also how to get IP](#)

Prizzle - March 31, 2016, 4:13 pm

Hi HF! I am going to be writing my first ever tutorial.

How does one get victims IP!

Basically first you want to go to an IP logger. I recommend Grabify. Since I cant post a link ill just say this. Google grabify and a website named grabify{dot}link should be first. Go on the website and input an URL that the victim could want to visit. If you don't know them or their from csgo. Just google "Karambit Case Hardened. Save that image. Upload it to imgur. Then put the direct link into grabify. After making the grabify link you want to use the google shortener link. I recommend putting on remove bots just in case steam sends a bot. If it wont let you send in steam then just send it to them like this blahblahblah(dot)com. Their IP should appear in the box at the bottom

How to Dox that newbs IP

So basically the method I use is this for doxing and usually works VERY WELL

So call there ISP. Ring

You: Hello, I'm The Head Security Department of (insert something random here), and we've been getting some red flags on a certain IP address with illegal activites associated with our company. May I speak with your manager?

Them: Sure, Please hold.

Manager: Hello, how are you?

You: Good (Re-explain yourself), then say that you are having maintence on your security systems and that you need them to bring up there info. (Info you would like, best is; Registered Names under IP, Phone, and address.)

With that also say you will need the info incase you need to file a police report on them.

Manager: Okay, just let me get it for you here... And their you go.

This worked like 9/10 times for me. Thanks for reading!

hackforums(dot)net/showthread.php?tid=3796831 <--- copied from that thread never knew. sorry to owner of that thread.

Agonises - March 31, 2016, 4:26 pm

And this works for every ISP yes? Also why have you merely copied the same 'Method' from this thread: <https://hackforums.net/showthread.php?tid=3796831>

Prizzle - March 31, 2016, 4:29 pm

I have never seen that thread. My friend sent me this on skype like a year ago and finally convinced me to join HF. I guess this was where he got it. Ill update my thread.

Good method, although pretending to be the head of security for a certain company isn't always the easiest thing. In my past experiences they have asked for verification, which I could not provide ;(

Prizzle - April 2, 2016, 6:12 pm

god damn it leechers 120 views and no thank you or anything.

If anything you're the leecher here you realize you copied someones thread and claimed it as your own, no ones gonna thank you cause this is a crappy method with a very low ratio of working since theres better methods then this just saying, have you your self used this before? It seems like you're just posting a thread on a topic you have no experience in.

Prizzle - April 3, 2016, 7:37 am

i have done this before. Almost exactly this. I never knew that existed it was in a notepad in my skype so ye.

Unless you create your own methods like I do people will bully and roast you for being LQ and a leecher you need to reinvent the wheel think of ddosing it went from shell booters to using straight server power with apis and stuff.
