Thread: [Cant load twitch in webbrowser](#)

**Malcolm????????????????** - April 2, 2016, 9:53 am

I am trying to watch a twitch stream from basic navigation in the vb.net webbrowser.  
I get loads of javascript errors upon request and the stream wont load, do anyone have any idea on how to load a twitch stream?

EDIT:

I am loading this in player form, for example: `player.twitch.tv/?volume=0&channel=channelname`  
Same as popout player.

`WebBrowser1.SuppressScriptErrors = true;`

Forgot exactly how it looks, on my phone at the DMV rn. But "Suppressing the script errors" should work.

By doing that, the errors wont be fixed and the stream still wont load.

I tried this before this thread btw.

Try an alternate browser control like Awesomeium or Gecko. Likely the IE engine can't support it.
