Thread: [phpBB Forum Password Guessing Tool?](#)

Moved - April 3, 2016, 6:41 pm

Hi,

So there's this old forum I'm on, using phpBB, and I'm looking to get into one of the admin accounts, most likely by password guessing. Does anyone know of any tools recommended to do this, or any methods to help out with the process?

If you get an upgrade for spotify during this month it comes with this feature pre-built in. Needs to be a one year tho

You could always try getting sentry.mba, making a config, get admins username and a password list, just try bruteforce it.

Does anyone have a Sentry MBA configuration for forums running on phpBB?

Moved - April 11, 2016, 11:27 pm

If there isn't anything pre-made that can be shared, can someone help me make a Sentry MBA configuration for a phpBB forum?
