Thread: [Multiple meterpreter connections/sessions](#)

iemand18jaar - April 7, 2016, 7:36 am

I've got in armitage a connection through a payload listener, but sometimes I lost the connection can I create multiple connections with meterpreter so if the connection drops I am still connected or can I make a kind of payload that I can call when I got disconnected

zharfan - April 8, 2016, 6:30 am

it is your connection to target machine is good well ?

.GonZ0. - April 8, 2016, 1:13 pm

Try to migrate to a different process.

NyQuil - April 8, 2016, 1:27 pm

if I remember correctly you could use ";" to use multiple autorun scripts (I think) so maybe it'll work the same with hosts (127.0.0.1;exampleip;example2ip)

iemand18jaar - April 9, 2016, 7:20 am

Yes the connection is good but how can I migrate to another process and what do you mean with the auto run scripts?

Clutch - April 20, 2016, 3:54 pm

You can set scripts to run on the target as soon as you first connect to them. What you want to do is migrate to another process that won't get killed. You can also set payloads to autorun on startup, I believe.

Here's an article talking about autoRunScript:

<http://blog.invisibledenizen.org/2008/12/automatic-migration-to-new-process-with.html> (Hopefully it's not too out-of-date, it's from 2008).
