Thread: [best methods for spreading? will pay for good methods](#)

KingUnbound - April 8, 2016, 4:28 am

I want a really good method, if the method works i will pay you for telling,

LogicGeek - April 8, 2016, 4:30 am

Method 1.TORRENT Spreads " Download Popular Games bind your server to the application" upload on torrent, enjoy.

Method 2.Omegle.com autopilot.

Method 3.YouTube Videos for example like you're giving out cracks & keygens.

Enjoy & Have Fun.

Best Regards, LogicGeek!

Bind the game in your client, if your client is nice crypted it's good.

LogicGeek - April 8, 2016, 4:39 am

1.download some software

2.then copy description from a torrent (or you can write your one)

save it to text file

3.bind your rat with your software

4.crypt it

5.change icon to original one

6.create torrent file

7.upload to torrent sites and use saved description (i recommend first upload to seedpeer bitnova sumotorrent

when you will have some seeds then upload to , somewhere on more better torrent, people dont download if they see 0 seeds)

I hope this will help you.

Best Regards, LogicGeek!

How many slaves per day for example ? ?

Excaahhh - April 8, 2016, 8:21 am

The torrent method works, I wouldnt bind it tho because if you test it you might get ratted/keylogged. I would do the torrent method but make your RAT say an error message.

Good luck spreading! ?

The method is unique and unsaturated. You see receive instant infection within minutes of the setup. The number of infection per days are not guarantee, it depends on how much effort you put into the method. I should say min 20 a day. The methods are also autopilot

Dont buy and ebook, they are all the same no matter what they say. There definition of "unsaturated" is only 500 using it

i wasnt planning on it, i have never bought an e-book and probably never will

TheUnknownPlague - April 9, 2016, 8:24 am

if you really willing to pay buy a exploit kit but if not torrent and youtube is what id recommend

kickrocks - April 9, 2016, 9:39 pm

pm'ed you sir regarding spreading methods
