Thread: [LEGENDS | MODIFIY SNAPCHAT | NO JAILBREAK](#)

sHAY - April 9, 2016, 5:21 am

[img]http://s9.postimg.org/57pm7cwyr/LEGENDS_2_0_HEADER.png[/img]

Have you been in the situation where you no longer have jailbreak and really miss the phantom tweak?

With this you no longer need jailbreak, i will help you to modify your snapchat so you can: Save pictures, upload pictures, spoof location, use your own GEO-Filter and a lot more!!

This works for iOS 9.X

[img]http://s9.postimg.org/jzubyp2v3/LEGENDS_2_0_DELIMETER.png[/img]

Important words

You NEED a Mac computer in some sort and you need a Apple ID
You also need to delete snapchat from your phone while doing this.
You also NEED xcode for this, you can download it from app store.

Turn off your passcode aswell.

You need to download [THIS](#)

Spoiler ([Click to View](#))

And you need to download [THIS](#)

Spoiler ([Click to View](#))

Change the name of the snapchat IPA, the name will be really weird and long so what you should do is to rename it to "Snapchat.ipa"
and then drag the Snapchat.ipa into the TweakPatcher-Master folder.

[img]http://s9.postimg.org/jzubyp2v3/LEGENDS_2_0_DELIMETER.png[/img]

How to get it to work

Open Terminal and write " CD then drag your TweakPatcher folder into the terminal window. So it says something like " CD /users/name/Desktop/TweakPatcher-Master " and hit enter.

Then paste this into the terminal: ./tweakpatcher.sh patch snapplus Snapchat.ipa

Now when that is done open up xcode again and create a new xcode project & select master detail application.

Now it will ask you for a product name, open up your terminal again and it will say product name: "picaboo-xxxxxx-xxx-xxxx-xxxxx-xxxxxxxxxx" paste that into the product name

and under that it will ask for organization identifier, same thing, open up terminal and paste this " com.toyopagroup " and hit next.

Press in the top bar and select your iPhone.

Now enter your iOS version where it asks for " Deployment Target " for me i'll put 9.2

There will be problem showing in the identity part, that is good you want to have that there.

It will say " team " right over the issue thing so go ahead and press that and add account and log in with your apple ID and select Fix issue

Now you should see Snapchat on your iPhone and it says its a untrusted developer, you need to "Trust" your Apple ID in Settings/General/Device Management.

Open up snapchat and then press enter in the terminal.

When that is done log in to snapchat, force restart snapchat and you're done!!

If you run into any problems post below and i will help you out.

I've used vmware for that though.

SHAY - April 11, 2016, 9:24 am

Edited the thread a little, this still works

mitchh - April 11, 2016, 9:26 am

gonna try this out. thanks!

You can check out [This](#), and you will probably find your answer there. Keep in mind that you need a lot of space since you're going to need xcode as well.

Veto-Media - April 15, 2016, 9:10 am

Is this similar to phantom tweak?

sHAY - April 15, 2016, 10:29 am

(Apr 15, 2016 09:10 AM)Veto-Media Wrote: [\[CITE\]](#) Is this similar to phantom tweak?

Yes it is, but for non-jailbroken devices ?

7 - April 15, 2016, 10:32 am

If anyone needs help setting up OSX virtual (vmware) with direct download links just let me know. I was about to start this as a free service

Here are the links:

[Latest Mac OSX Vmware Image](#)

[VMware Unlocker](#)

As you can see i have added direct links for vmware image of OSX
