Thread: [\[TUT\]Attach your .exe to a jpg, pdf, doc, xlsx](#)

ioohax - April 9, 2016, 6:21 am

A very simple and a free method to glue files together. Great for begginers and easy jobs.

>>>>>>>>NOT FUD<<<<<<<<<

Requirements:

- 1)WinRAR
- 2).JPG, .PDF, .DOC or Any other type of file + .ico of the required type.
- 3)Your RAT

I hope you find it useful!

VirtualMon3y - April 9, 2016, 9:46 am

Nice tut... I will test this later and see if it works like your video shows.

One suggestion. The ico would be better if it was of the jpeg which can be done with an online icon converter.

Do they need winzip to execute this "picture" also What file extension is it as that setting seem to be turned off in your demo.

Edit: I reccomend not duplicate posting as you have two of the same TUT's you might get a warning.

I've made this icon with an online converter, any icon is suitable actually.

No WinZIP/WinRAR/7zip is required because its a self extracting executable.

I've posted the first one in a wrong section, will ask a moderator to remove.

Oh yeah I have seen the method a long time ago. I was more interested in if the file extension was different which you can't see in this tut.

Most good crypters will do this these days by binding the jpeg with your server anyway.

And yes ask an admin to remove it for you. They should sort that out.

And yes ask an admin to remove it for you. They should sort that out. Extension remains .exe - This is the basic spoofing there is right now, i thought it will be useful for begginers.

memesaregreat - April 9, 2016, 10:07 am

this looks dank af,

I'm pretty sure this method would work fine.

OP is an gen1uz

I dont see your Tut. Could you please send it via PM or post it here again.

Thanks man!
