Thread: [best attack method for home connections?](#)

Soulander - April 9, 2016, 8:22 am

title..

25 characterssss

The Boogeyman - April 9, 2016, 8:23 am

I usually use DNS Attacks since they are the best method up to date but if not that then I use CHARGEN.

Puffer Fish - April 9, 2016, 8:25 am

DNS and NTP is the best attack for me, I use raw udp or chargen if it doesn't work.

Soulander - April 9, 2016, 8:32 am

ok thanks

also is serverboot.com good for home connections?

Puffer Fish - April 9, 2016, 8:34 am

(Apr 9, 2016 08:32 AM)Soulander Wrote: [\[CITE\]](#) ok thanks

also is serverboot.com good for home connections?

Never heard that before, and yes most of booters are hard hitting with home connections.

Soulander - April 9, 2016, 8:44 am

also what about port?

i tried this site: [t1shopper .com/tools/port-scan/](#) and the ip is responding on port 88, should i use this or just 80?

im sorry for my dumb questions :P

Soulander - April 12, 2016, 8:09 am

bump

also bought serverboot.com and its shit, doesnt work i tried it on myself so i will chargeback any good booter mainly for home connections?

Sly. - April 12, 2016, 8:11 am

I can help you with this no problemo.

And UDP is the best or any UDP based attack such as NTP, SSDP, Chargen, DNS.

I'll set you up something to boot with if you want, or if you really want a Booter, look in the marketplace.

kmz22222 - April 12, 2016, 8:14 am

Probably DNS.....

redlightrouter - April 12, 2016, 9:35 am

Everything I see this question I cringe.

THC - April 12, 2016, 10:42 am

I would use a UDP, NTP, or Chargen based attack.

To address the ports:

HTTP (Web-Traffic) 80 – Default Internet Port Accepts general UDP/TCP data.
(Xbox Connections) 80 – Default HTTP Port Accepts general TCP data.
– Kerberos Auth Port 88 – Accepts all UDP data.
Macromedia Flash 1935 – Accepts all UDP data.
Xbox Default Port 3074 – Accepts all UDP/TCP data.
(FTP Access Port) 21 – FTP Port Accepts all UDP/TCP data.
SMTP/Mail 25 – SMTP accepts UDP/TCP data.
MySQL Port 3306 Accepts TCP data.

In other words, use port 80 for any of your basic needs interms of hitting home connections offline

Soulander - April 14, 2016, 12:19 pm

thanks everyone i really appreciate your help

zavi156156 - April 14, 2016, 2:06 pm

DNS And NTP attack are good for home network, i vouch for this stresser:

htt ps://Stresser.Club

(Apr 14, 2016 12:27 PM)Craxzy Wrote: [\[CITE\]](#) NTP or DNS flood on port 80 always takes down a home connection

well not with shitty booters :/

i tried serverboot and instress, nothing -.-
