Hey!

Eventually I haven't yet found any interesting URL I could actually exploit decently.

All of those websites got updated to prevent cracking during the last year. (with captchas, encyphered data, encapsula...)

I could make a config for costa using this url though :

<https://costagiftcards.co.uk/customer/account/login/>

If you can do proxyless Amazon with capture I'd be heavily interested for an amazing price. Or even without proxyless.

Also interested in an Apple.com proxyless with order capture

Amazon right now is a no go, there are probably still exploitable URLs but I haven't found any.

As for apple, what is the website exactly? I made a config for AppleID would that be the same?

If a config doesn't work there is no point for me in trying to fix it, it can't be considered as a config if it doesn't work. I'd have to remake it, and I don't actually mind.

I have PMed you.
