Common Question: "Do I need to forward my ports to use this?" - Answer: NO! You do not need to forward your ports to use this great tool.

The coder of Galaxy Crypter (HF's Number 1 Crypter) has left a few words about iRtehStealer:

(Jul 7, 2010 10:49 PM)\$sweet Wrote: [\[CITE\]](#) I have personally tested this stealer. I let iRtehLeet test my crypter, and he did the same with the stealer. Guys, not sure what else to say other than it's perfect. Perfect in the sense that its features are well balanced (not too many, not too few), and they are all fully functioning. I did my fair share of testing and I can definitely say that I am pleased with this product. Not to mention, this is truly well coded and that speaks to it's quality.

Good luck with sales, I know you will get many.

2010 11:45 AM)Karpaltunnel Wrote: [\[CITE\]](#) Ok Irteh as promised here is my vouch.

And i am not vouching because u are a nice guy; no; i am vouching because this Product is awesome (of course u are also nice :-p).

First of all i have bought the Stealer package.
for 75 \$. The best Deal i ever made.

Lets Come to the Stealer.

The Stealer was set up in 1! Minute. Very easy to use; very easy gui.

I tested the Gmail notification and installed it on my Vics.

And baam after 2 Minutes i got 600 Mails... lol; now the only Problem is; i must read them all :-p :-p

The Stealer will get a 10/10

Now the Crypter.

The best Thing is the Support Forum; many howto and Tutorials. (some help is also included in the Crypter)

My advice: read them; because the Navigation in the crypter is well a bit alternative ^^.

The Payment and Registration was done in a blink of an eye.

He is a very kind and respectfull Member.

He takes his Time to help u and clean all open questions.

Helped my Crypting my File over Teamviewer; and looked at me while crypting if i do everything right.

Another great thing is u can crypt ur bot to: exe scr bat and so and bind jpeg execute them as shell and many more.

All necessary functions are included in this Crypter.

The most important part isnt: being kind, being fud, being smart,

no the most important thing is: continuing a project and work on it.

I am sure; as u can see on the stealer, that this Crypter will not die in just a few days or weeks.

No i am sure that this will be a long time Project!

So all together i really recommend this Crypter and this Guy :-)

Dont be stupid and buy the Stealer Package! :-)

Ahh well and btw of course i am FUD:

http://scan4you.net/result.php?id=7659b_4dsai

So BUY IT GUYS :-)

Hope that helps u a bit.

Kindly Regards

logs are sent to ftp or to your email (Yahoo/Gmail/Other)

You can set the timing the logs to be sent.

You have also a remote access that makes easy to you to uninstall or disable the keylogger from the victims pc :D

I have personally tested this stealer. I let iRtehLeet test my crypter, and he did the same with the stealer. Guys, not sure what else to say other than it's perfect. Perfect in the sense that its features are well balanced (not too many, not too few), and they are all fully functioning. I did my fair share of testing and I can definitely say that I am pleased with this product. Not to mention, this is truly well coded and that speaks to it's quality.

Good luck with sales, I know you will get many.

I'm guessing you've arranged your logs by "Facebook = FB" etc.

How do you get them into different sections like this?

Orgy2 - July 13, 2010, 6:08 am

its rather easier, you just create a filters like this:

[img]http://i26.[censored].com/5nrroua.jpg[/img]

after that you color em with the labels.

iRtehLeet™ - July 13, 2010, 6:13 am

Those are pretty kickass filters, lol. The things you can do with gmail to make your stealing experience the best it can be.

Might buy this but here's some questions:

IS it FUD or do I need a crypter? If it's FUD - how often do you update (right when it's detected?)

Can the keylogger send the logs to a specific folder on my FTP? like logs/ folder?

Last question, why should I buy this one instead of another one? :p

Thank you, I'll be adding you on msn in a few minutes!! :)

1. Yes its fud. If it goes un-fud (hasn't happened since like v3.0) I will FUD it within 1-2 days hopefully depending on detections

2. Yes it can, specify your server in the box ending with /folder name (example: <ftp.hackforums.net/logs>) Will send to the folder named logs in the root folder of the user id and pass entered

3. Because its a high quality product. ?

I got another question, i'll be able to steal steam accounts trough this keylogger/server?

If i'll buy this keylogger, its will be FUD forever?

And last question, you may teach me how to spread the server? (of course after the purchase)

Thank you, kryptogo!

Quote:I got another question, i'll be able to steal steam accounts trough this keylogger/server?

Yeah I have a customer who said he got a bunch already with the keylogger and force relogin function.

Quote:If i'll buy this keylogger, its will be FUD forever?

I re-fud it anytime it goes un-FUD so technically yes. Until I support the project.

No spreading is up to you.

I banned you from my site for 1 week for spamming the forum with topics like "I WANT REFUND" after I told you the product wasn't for you, you continued asking for my PayPal ID over and over again and once I gave it to you and delivered product you instantly wanted a refund because I guess you were under the assumption that my product was an "automatic" account hacker where you type in the email and press a button? Either way your an idiot. Buying my product then spamming my boards = 1 week ban.

WOW, Just read all 42 pages of this thread, This looks amazing!

I asked a question on your forums, in the "Added downloader" thread.

but just incase, if you don't see that i will ask over here also:

The downloader function, can i download a file after the person is infected with your keylogger,
(say a day or 2 later), or does the file have to be downloaded when the keylogger is run?

Because what I want to do is, Infect people with this, and then upload my rat server onto their
computer.

Oh, and 1 more question, the file binder, is it external, or built in? and can i bind multiple Files?

You should have it send serpent logs when someone logs into PayPal, their online bank, alertpay, etc. Or maybe an option (like, if window contains "paypal" then start logging and send an email with the log). Use the getwindowtext API :)

Who said its fraud? It can be used for 100 legal reasons.

Theses "Big company's" could use your product to test the security of their site. Just like a crypter, a stealer can be used in both legal and illegal ways :)

Can you post what will be in version 4.5+ ?

I have a few things in mind.

1. Alright.
2. It's FireFox 4 Beta -> <http://www.mozilla.com/en-US/firefox/beta/>
3. Alright awesome!

Mind sharing a few? I'd like to know what package I should buy ?

Gold! Gold! Gold!

Lifetime support. You could never beat that. Especially since it's \$25 now.

I've been a member and active on his forums and I've seen two updates.
He's very fast with support as well. I was very impressed and I will be donating soon.

This gets my first vouch. ?

Remote access Trojan

This is not a rat but does have a downloader to update your servers.
It also allows you to disable or uninstall your server from a victim.
This is a key logger.

I'm also PM'ing you with a more specific question so that it doesn't jeopardize the possibility of revealing any possible loopholes that could be used by anyone exploit this program (against your TOS) that sounds so great and I do plan to purchase.

I receive many PM's and help many people through MSN with the software.

The reason for the responses and closing of threads is because people will not use the search feature and usually ask questions that have been answered multiple times before with detail.

Private FTP can obviously be found here so it shouldn't be much of a search.

If you would like we could show MANY examples of happy customers that are happy with the customer service.

I would very much like to see many examples of happy customers happy with Mr.iRtehStealer that counteract my post, which was aimed entirely at him. I believe i have an example of you helping on the forums, and him coming in the same thread with curtness.

It's interesting you mention the search feature as i am sure if i was to just serach "FTP" i would find many threads such as those that were given crude responses. This also does not explain how the problems the users have were blatantly shot down by Mr.iRtehStealer, and if they were treated as such due to the easiness of the solution being found in detail, how do you explain the last picture with the most obvious questions of all being asked by user Alexandria being given the most kindness?

It is the first time I buy a keylogger, so I can't compare to anything else.

But it is perfect, FUD, you can bind it to anything, the victim can scan it on any AV, it will not be detected.

I started spreading on only one thread on a warez forum, already 17 victims. And it was just while I was waiting for v4.4.1 !

If you are new to keylogging like me, just buy this one, there is a video tutorial and a support on the forum. It is simply awesome !
