Thread: [Grand Pootis Presents: Math Helpdesk!](#)

Grand Pootis - April 10, 2016, 8:45 pm

Thank you for looking at Grand Pootis' Helpdesk.

I am pursuing a bachelor's degree in applied math. Here are the classes I have taken and done well in (but don't necessarily remember). If you have ANY math question from any class up to these then please ask. I will not ever bait you into paying:

Every high school math like algebra sequence, trig, etc
Stats for Engineers (remember least)
Single Variable Calc I and II (remember good amount)
Multi variable and Vector Calc (remember good amount)
Discrete Math (CS style, know a good bit)
Linear Algebra (took recently)
Ordinary Diff Eq (pretty decent but not on partial DEs)
Any Java class
Most intro CS classes
Computer Architecture classes
Basic Circuit Design and some C++

I also have taken many AP exams in my time. I am particularly talented at writing in MLA and APA formats and am happy to help with your essays.

I am really hoping someone will request my help. Please don't ask me to complete problem sets. I like helping you learn, not do your homework while you smoke pot.

I also have taken many social science classes and have an associate's degree in it (sociology, psychology, communications courses, logic courses, etc).

Hello, that would be great to get a PM about trig help.

It has been awhile since I have taken that subject but all the classes I'm in build on it so I should be able to help.

Worst case scenario I will relearn it to help you.

Thank you,
G. Pootis
