Thread: [Unresolvable IP](#)

DashieXP - April 11, 2016, 4:55 am

I dont want my IP to be resolved by resolver. How can I make it Unresolvable

Description - April 11, 2016, 4:57 am

They don't work anymore.

Just make sure your skype is updated and you're good.

Most likely they're resolving your old ip which was in the database before, meaning you're probably on a static ip you should call your isp and ask to get your ip changed.

Just make sure your skype is updated and you're good.He's still resolvable if he's in your contacts. However, Skype Resolvers themselves don't work anymore due to the Skype update which unchecked the "Allow direct connections to contacts only".

Which means the Skype resolver client needs to have the specific person in its contactlist.

What about you stay on one account?

Most ISP's don't change your IP on request. So if you got a static IP you're fucked. ?

YayHar - April 11, 2016, 6:21 am

With the new update to skype, Wireshark will still get your IP.

Just do what anybody should already be doing and have on a VPN.

All you need is a SOCKS5 proxy set up on your Skype.

With a VPN on you won't have access to HF.

Lil Vert Uzi - April 11, 2016, 6:33 am

you are unresolvable now with skype resolver api. if someone gets you in a call they can still get your ip via wireshark

Sift - April 11, 2016, 11:50 am

Use skype web vpn + proxy extension then you're good.

Senpie - April 13, 2016, 10:00 am

Wireshark can still get your IP address through calls, but I suggest moving away from the Skype platform and moving to a more safe solution.

If you would like to learn more about how to secure yourself, check this out:

Modafiendz - April 22, 2016, 3:53 pm

Skype has been P2P for years, packet analysers will always find the source IPs on skype. Even though Skype resolvers no longer work, I'd recommend making sure it still only allows direct connections to contacts only.

Jupiter - April 24, 2016, 3:05 am

Best way for skype would probably be to use a SOCKS proxy, as well as calling your ISP and changing your IP if you haven't already. Also don't accept calls or contact requests from people you don't know or trust to avoid being wiresharked.

Voxi - April 24, 2016, 7:53 am

Update your skype and make a new skype and you'll be 100% good, so no skype resolver can resolve your IP address.
