Thread: [Script to down OVH](#)

oParoxysm - April 11, 2016, 6:37 pm

Is there any script that can bypass OVH's network filter? I've got the power behind the scripts, I just need the scripts. Anyone care to help me out?

illuminati - April 11, 2016, 6:40 pm

The one and only raw UDP/TCP.

Gigabear - April 11, 2016, 6:40 pm

Use RAW UDP. Your host will need to install the scripts to enable spoofing on their datacenter. Usually during construction the contractors ask if they want to install the spoofing scripts. Then you need to find a slap.pl script. The slap.pl script is very underrated for how powerful it is. It automatically probes the internet for spoofed UDP sources so it can accumulate them to deliver a fatal blow to your target. The amp is at least 30x. ?

If I'm just going to use UDP, why can't I use Amp scripts such as NTP or DNS? No for TCP, can't I just use Dominate or something similar?

Gigabear - April 11, 2016, 6:47 pm

My above post was a joke. You have a lot to learn before you can expect to be given handouts. I will however help you on your question in order to stop the cringe. You cannot use amplification such as NTP or DNS on an ovh because it gets blocked at their firewall.

<https://hackforums.net/showthread.php?tid=5230131>

^anyone of you can do this?

bezbo - April 12, 2016, 7:45 am

I have a script that downs almost all OVH servers :)

Noxiu - April 12, 2016, 9:19 am

(Apr 12, 2016 07:45 AM)bezbo Wrote: [\[CITE\]](#) I have a script that downs almost all OVH servers :) And you wont release it, so why the fuck you write about it? You want to make your internet dick half inch bigger?

Dont boost your internet ego. Please. Not anymore.

(Apr 11, 2016 06:40 PM)ImPro Wrote: [\[CITE\]](#) The one and only raw UDP/TCP.hahaha

raw udp ?
holly shit ?

Medusaweb - April 12, 2016, 9:46 am

to bypass arbors anti ddos it is necessary edit payload of entête UDP and edit the entêtes IP this methode serves just bypass arbors anti DDOS not necessarily a down target

Drunkatwork - April 12, 2016, 10:19 am

You guys are all stupid. Arbor and Tilera firewalls will teach themselves within 5 minutes to mitigate a type of attack. If it wont, a ovh worker will do it within an hour.

You need a lot of power, simple as that.

bezbo - April 12, 2016, 12:13 pm

Why would he release it?

So skids can abuse it and get it patched in 5 days?

Drunkatwork - April 12, 2016, 2:45 pm

Or it doesnt even exist. Lmao

m1rk - April 12, 2016, 2:47 pm

Wtf guy the traffic does not pass directly in the arbor protection

The trafic starts with NetFlow

if the traffic is legitimate then it happens otherwise it will in protection arbor

3yZtwglFSCUs - April 13, 2016, 5:22 am

i can only bring down site w/o protection or with cloudflare my attack seems not working on ovh ?

bezbo - April 13, 2016, 5:32 am

He's got a point. The only reason you posted here was to boost your ego in front of skids of this site. You have no plan on sharing it so why post?

I posted it because i have it, get butthurt more kid

actuallyalex - April 14, 2016, 7:51 am

There was a guy called Mic Righteous who used to down OVH's for me. Search by username on here you'll find his thread.

Why would I get butthurt over you? That would just be sad.

Codevade. - April 15, 2016, 2:59 am

(Apr 11, 2016 06:40 PM)Gigabits Wrote: [\[CITE\]](#) Use RAW UDP.No this is incorrect, please use COOKED UDP, Medium-Rare works best for me on OVH but other networks require anywhere from Well-Done to RAW+Bloody.

Using COOKED UDP will also prevent what is known as Server-Side Salmonella and other food-related illnesses.

Regards,

Codevade

Drunkatwork - April 15, 2016, 3:25 am

Vouch For codevade

IT helped me prevent getting cancer for a long ass Time, but this thread is too cancerous so doesnt work anymore.
