Thread: [\[Tutorial\] How to totally remove the Win32 Sality virus.](#)

kmz22222 - April 12, 2016, 8:23 am

Before we start.
What is the win32 sality virus?
It is an End-Virus Which totally destroy any exe file on your computer.
It can also damage other files,however it makes them non usable at all.
If you have got this virus on your pc,expect a chaos happening in your hard disk drivers.

=====

What do you need:
A USB/CD
The PC Infected with the virus.
Brain.exe

How to remove this badass virus:
1-Install a new fresh windows on your USB/CD
2-Boot your shit up and go ahead and click install now button.
3-When you are somehow at the "Partition" part at the setup FORMAT EVERY SINGLE HARD DISK YOU HAVE
4-Make sure you have done step 3 right because it is very fucking important.
5-Gratz,now go ahead open Internet Explorer and install the following:
1. ESET Smart Security.
2. Malwarebytes.
3. Comodo Firewall
4. Glasswire Network Security

Please do not send any file to any other computer if you have win32 sality virus,we don't want it to spread.

Special thanks to the HF Member Soufian [uid=46903] for providing useful programs to download after removing the virus.

=====

Please reply "as a feedback" to make me do more tuts and to keep this thread alive for the noobs out there.
cya.

? Soufian ? - April 12, 2016, 8:26 am

The best method is to not be stupid and download random shit.

1. ESET Smart Security.
2. Malwarebytes.
3. Comodo Firewall
4. Glasswire Network Security

hempuk - April 12, 2016, 8:31 am

so basicly your saying if you have this virus you need to format reinstall your PC

or you could use the salitykiller over at Kaspersky which says that it will remove this from your pc

<http://support.kaspersky.com/viruses/utility#salitykiller>

Hemp ?

Hemp ?

Any program that claims to be able to kill the sality virus [IN MY OPINION] is not good.

Killing such virus is not easy.. as it infects more and more exes by time.

Cleaning this could be hard,it will rather delete the exe? maybe?

However killing the virus without deleting any shit could take MASSIVE TIME so i just suggest my method.

Niko - April 12, 2016, 11:54 am

Actually, I was hit with this back in August, and I survived without a reformat

Look into the Sality Killer Here - <https://support.kaspersky.com/viruses/utility>

My god....

I am too lazy to say it again so here is the quote:
