Thread: [\[SKYPE4COM\] Skype Info Grabber](#)

**deiski** - April 12, 2016, 10:56 pm

Was looking through some old projects and found something that someone had requested help with a year or two ago, thought I would share it with anyone else that might find it useful.

No worries mate, hopefully my old code can be of some use to you.

You should use something like:

Code oSkype.SendCommand(New SKYPE4COMLib.Command() With {.Command = "GET USER " + h + " AVATAR 1 " + f + "\Avatar.jpg"}) (where h is their handle and f is the folder path)  
To get their avatar as well :D

Oh man if only there was a way in Skype to see someone's profile...  
JK, nice release Im sure it would help some people.
