Thread: [Php source code grab?](#)

Gmanthelearner - April 13, 2016, 1:12 pm

Is it possible to grab a webpages php source code? If you know how to please add me on skype as i would love to know more
skype: shadowcloak12

Vicci - April 13, 2016, 2:00 pm

It's not possible unless you get access to the server itself.

NobleSausage - April 13, 2016, 3:37 pm

its possible using LFI i think

Vicci - April 13, 2016, 3:40 pm

No it's not and it's for the simple reason that PHP is a server-sided language.

well if u upload a shell its possible

Edit: there you go, told u there is a way

Yes I did and you still need access to the server through a vuln in order to do that so stop playing smart and go to bed.

Imao what do you think OP meant? Of course u need some kind of VULN to be able to access it do

you think you can just magically download it?

(Apr 13, 2016 02:00 PM)Vicci Wrote: [\[CITE\]](#) It's not possible unless you get access to the server itself.

I just showed u its possible if u find a vuln.. that doesnt mean i have access to the server
im not playing smart ur just dumb giving general replies

I think that's what OP thought because he doesn't seem very experienced within this area.

If you find a vuln you have access to the server end of story.

@Vicci

You joined that forum on 04-07-2016..Whats wrong with u that you have over 380 posts?

Please stop LQ-spam posting thanks ;)

@Op

It's not possible without access to server :)

Gmanthelearner - April 14, 2016, 9:08 am

Thanks for all your help guys! I knew it was server sided but I thought there might be an exploit for it, I'll have a look at actually gaining server access.

php://filter using LFI is not an exploit? what do you call it then?

Stfu u wanna be hacker ??

Mr. WAVES - April 15, 2016, 10:05 pm

OP, I suggest you to read about LFI Exploits. Start testing your target and if you're lucky it will be vulnerable. Execute the FLI and you'll have an access to the server by a webpage (called shell).
Good luck
