Thread: [INBOX SMTP OR WEBMAIL DOMAIN SENDER](#)

Roger59 - April 13, 2016, 3:31 pm

Hello Please doesn't anyone know a good webmail DOMAIN or smtp SERVER that can spam almost all domain inbox especially GMAIL i need it for GMAIL. but I can't get a good sender to penetrate gmail inbox without saying SPAM WARNING on the message.. I need help please..

Thanks.

I think he's wanting SMTP authentication (username/pass/smtp server) to spam inbox. Even though your program has smtp features, it does not come with authentication credentials to run it. You need to state that in your thread/posts. ?

Thank you for your reply, I didn't think that people will expect me to provide authentications :/.
