

## Forum:[Hack Forums](#)

Thread: [\[readweb.bat\] - rate & reply - view website sourcecode from command prompt](#)

**ImDeepWithWindows** - April 15, 2016, 1:14 am

its pretty self-explanatory

syntax:

readweb /?

readweb h++p://website'com

readweb /install (adds it's self as a command prompt command for the logged on user)

tell me what u think and what u think about how it installs it self as a command prompt command,  
could it be done more efficiently some other way  
it would be nice if someone would rate this too

im not allowed to post anything with website urls in it on here yet so in the code replace \*http\*:// and  
\*https\*:// with what theyre obviously supposed to be

Code @set "self=%0"

goto :batch

### NOTES

\*\*\*\*\*

must have the file extension "bat" not "cmd" for it's install as a CommandPrompt  
command for the currently logged in user function to be able to work

this is because to compensate for the complications of the batch-file 0th parameter  
being a different value depending on weather the batch-file is started using explorer  
or command prompt i wrote the install macro to work with the way the value is when  
this batch-file gets ran from command prompt which does not include the batch-file's  
file-extension in it's name (or the folder-path either)(this is on windows 8.1 as of 3/30/2016)

storeing the 0th parameter's value into a variable in the first line of the batch file and using  
that var instead is a vista compatability thing that idk if its been patched or not yet

\*\*\*\*\*

:batch

@echo off

for /f "tokens=\*" %%A in ('echo %self%') do set "commandname=%%~nA"

if "%1"=="/?" goto :help

if "%1"=="-?" goto :help

if "%1"==" " echo.type "%commandname% /?" for an explanation of how to use %commandname%  
& goto :end

if /i "%1"==" /install" goto :InstallAsCommandPromptCommand

```
if /I "%1"==" /add" goto :InstallAsCommandPromptCommand
```

```
set "targpage=%*"
```

```

```

```
echo.type: %commandname% /install
```

```
echo.
```

```
echo.
```

echo.NOTES:

echo.does support HTTPS protocol.

echo.

echo.as always with viewing the source code of a webpage

echo.you can only view client-side executed code ^(like html^)

echo.not server-side executed code ^(like php^)

echo.just like when you click "view page source code"

echo.in any web-browser

echo.

echo.many websites have blocked a method of checking the client-side

echo.executed code of their webpages that gets the exact text of the

echo.client-side executed code so this application uses a different

echo.method that can not be blocked but if the targeted webpage

echo.didn't add a closing tag for certain HTML tags (such as ^</BODY^>

echo.and ^</HTML^>) into their client-side executed code this method

echo.of querying it adds those closing tags it self to the text it displays

echo.

echo.

:end

just now i got a -9 reputation in the last few hours and idk what to rllly think about your repy with a peace sign, did u click something that gave me that? im still new to hackforums so i dont rllly know what that something would b. if u did why? am i breaking some rule?

(Apr 15, 2016 01:16 AM)\_\_\_\_\_ Wrote: [\[CITE\]](#) ?

if you gave me a negative rep point for thinking i was asking for rep when i typed "rate & reply" i mean rate as in rate the post not rate me if theres a different word i should use besides rate please tell me im still new to hackforums

Sorry, but I didn't give you negative reputations. I am also mew here, and see my situation. I have -20 reputations and 40% warning for nothing.

I am sorry! I am mew here! I will take some time to understand! Why do you give reputations without waiting for me to learn? ?

I can change it to a +3 just as easily as I gave you a -3. But you have to earn it like everyone else.

You gave me -3 for potential harm. Do you really think it was my intention to give potential harm to fellow members?

i agree youre not being harmful, idk why he'd think that maybe taking about rep is "bad etiquette" in the rules or something and replying to me is getting other members to "endanger themselves by breaking rules and risk negative points"

i cant reply to pms cuz i dont have enough posts but i got yours about that other website, ill check it out

there are some shit talkers on here that i dont mind but alot more petty-violation reporters and rule-huggers on here than i expected that i do mind,  
for a website thats called "hack forums" theres alot of fucking rule-huggers and petty-violation micro-managers. idk if theyre trying to get some automatic rep points for reporting someone or what

youve helped me out with some info about this place and ill give u positive rateing for that if i can, hopefull that should help balance out youre negative rep points over some bs

?CARUs L?VE?™ - April 17, 2016, 11:10 pm

If you both want to PM me and we can talk about it there that is fine. No need to bloat this thread to the top of the forum.
