Thread: [PHP Echo Mysql Data from 2 tables BY newest data](#)

CodeBinary - April 15, 2016, 2:42 pm

I asked stackoverflow but so far no one responded :(

So I am trying to echo the 10 newest data from 2 different tables. Ive tried

```
Code $stmt60 = $db->prepare("SELECT * FROM 54x2 ORDER BY date_time DESC LIMIT 5");
$stmt60->execute();
$stmt61 = $db->prepare("SELECT * FROM dd ORDER BY date_time DESC LIMIT 5");
$stmt61->execute();
$row60 = $stmt60->fetch();
$row61 = $stmt61->fetch();
```

```
$var = array($row60['date_time'], $row62['date_time'], $row64['date_time'], $row66['date_time'],
$row68['date_time'], $row70['date_time'], $row72['date_time'], $row74['date_time'],
$row76['date_time'], $row78['date_time']);
$var7 = array($row61['date_time'], $row63['date_time'], $row65['date_time'], $row67['date_time'],
$row69['date_time'], $row71['date_time'], $row73['date_time'], $row75['date_time'],
$row77['date_time'], $row79['date_time']);
```

did that about 10 times with offsets increasing by 1 then added them to arrays then did like a 100 if statements checking which one is newer but ive tried for hours doing that and I couldn't get it to work. Is there an easier way of doing this without making 100-200 if statements?

I think you need for each loop there

Please change your variable names. You can't just keep them like that.

And yes, you need to do a for/while/foreach loop.

newQuery - April 15, 2016, 4:09 pm

OP try this:

PHP Code

```
<?php
```

```
$stmt60 = $db->prepare("SELECT * FROM 54x2 ORDER BY date_time DESC LIMIT 5");
$stmt60->execute();
$row60 = $stmt60->fetch();
```

```
$stmt61 = $db->prepare("SELECT * FROM dd ORDER BY date_time DESC LIMIT 5");
$stmt61->execute();
$row61 = $stmt61->fetch();
```

```
echo "<u>Datas from 54x2:</u> <br/> <br />";
foreach($row60 as $item1){
```

```

    echo $item1['date_time']. '<br />';
}

echo "<u>Dadas from dd:</u><br /> <br />";
foreach($row61 as $item2){
    echo $item2['date_time']. '<br />';
}

```

Yes, all the datas from 54x2 would be at the top and all the datas from dd would be under the 54x2's datas

Oh im trying to put which ever one is newer on the top :/

newQuery - April 15, 2016, 5:26 pm

PHP Code

```

<?php
$sql =
"SELECT 1.date_time, 2.date_time FROM 54x2 AS 1, dd AS 2 ORDER BY date_time DESC LIMIT 5";

```

```

$stmt = $db->prepare($sql);
$stmt->execute();

```

```
$row = $stmt->fetchAll();
```

```
foreach($row as $item){  
    echo $item['date_time']. '<br />';  
}
```

Did this from mobile, let me know if it's working
