Thread: [Prevent skype resolvers?](#)

Lagura - April 16, 2016, 1:56 am

I'm trying to prevent my skype from being resolved,

This is my current skype connection settings

<https://gyazo.com/9e59e1a6f386433274370189dbbe7663>

If anyone can help me out, that will be great?

P.S I don't have a proxy to use

Brotherhood. - April 16, 2016, 1:57 am

Most / all of them got patched?

Lagura - April 16, 2016, 1:59 am

I would move over to web.skype if it isn't as buggy, you have troubles adding/deleting/accepting people

Atlas. - April 16, 2016, 2:39 am

That's because resolvers have your IP already from someone previously resolving you so it's stored. If your up is already stored nothin will stop it because that ip is saved to your Skype name on the server. If you want to change that either change your ip or Make a new Skype account

Nachfolger - April 16, 2016, 2:40 am

If you're worried about getting ddos'd when you haven't been properly introduced to the hackerz world.

Mr. Robot - April 16, 2016, 2:45 am

The update for skype will fix resolving, the update sets "allow direct connections to contacts only" by default to stop skype resolvers working.

If someone is your contact and they are using skype DEOB they will be able to resolve your IP still.

SysAdmin - April 16, 2016, 2:49 am

As Mr. Robot said, there was a setting in skype that allowed direct connections regardless of a connection from the host (Either a contact or an unknown) that you could turn off and basicly render any resolves innactive.

xc0dedamaster - April 16, 2016, 3:01 am

There was a guy on HF that was providing a script that changed your skype IP to his dedicated machine and you wouldn't get DDoSed nor resolved.

Lagura - April 16, 2016, 3:02 am

Yes if someone is your contact on skype, they can resolve you.

Lagura - April 16, 2016, 3:16 am

Did you try booting the IP?

Mr. Robot - April 16, 2016, 3:27 am

OMFG LOL so good. so fucking good.

MathiasHansen_temp1 - April 16, 2016, 3:37 am

You can't use a web-based resolver anymore, you have to Skype Obfuscate, like you used to back in the day.
