Thread: [Help with custom shapes/sections?](#)

Marketplace Buyer - April 17, 2016, 12:58 pm

Right, so I am a new photoshop-er and want to be able to give out/sell graphic designs, mostly thread designs. But, the problem is, I want to be able to make custom shapes/sections, such as these: gyazo.com/c23d5fc3595d54b2e6c27bde4acbe99b or gyazo.com/71dad9fa595d5ed654412738fee25d02

How do I do so? Thank you.

There are various ways to achieve this. Try using the Pen Tool. Draw your shape and then right click and hit 'Fill Path' and then right click again and press 'Delete Path'.

That helped for creating custom shapes, but what about those diagonal slanting sections? How do I achieve those?

Draw a rectangle, then go to Edit -> Transform -> Skew. You can now skew the rectangle; if you go to the transform toolbar at the top:

then you'll be able to do this very precisely by changing the 'V' value.
