Thread: [\[LEGENDS\] Private Investigation Methods and Anonymity Helpdesk](#)

Epicur - April 20, 2016, 1:46 am

"Others toil their entire lives to make a name for themselves, some are just born LEGENDS."
Hey all!

On behalf of Legends, I'd like to present our Private Investigation Methods and Anonymity helpdesk. We're here to answer any and all of your questions, but please remember HF rules when asking them.

Do note that this is NOT a doxing service. We will NOT be completing doxings for you. Do not contact us if this is what you're looking for. We're here to offer advice on an education basis, and to try and help you out with anything you may be struggling with.

Members:

[Epicur](#) - although my business on HF is 100% WH, I'm a freak of security and like to be as much protected as I can. I'm studying Telecommunications Engineer, and one of my subects is about Tunnels and MLPS, which is similar to the technology VPN's use. I'll try to answer your questions as good as I can.

[Stazzy](#) - 8 months of experience in pi and anonymity topics. I do my work privately offsite, feel free to contact me if you have any questions.

[Zayzo](#) - I complete services for doxing/de-tracing on HF and off-site. I've been doing services of this kind for a multitude of years. Contact me if you have any questions.

[?nalyse](#) - A young doxer with about 1 year of doxing experience as a hobby.

Things we can help you with on this thread:

- Any questions related to the building of an OPSEC
- VPN/Socks/Proxy questions
- Doxing
- And many more, everything that fits in the section!We will do our best to help you out!

Got a question? We're here to help! Drop it below or PM one of us. Things PM'd to us will be automatically classed as confidential and will not be shared :)

Formal - April 20, 2016, 10:07 am

Vouch for OP and his service!

Tokyo - April 20, 2016, 2:19 pm

Feel free to leave a question on this thread. If you need privacy, don't hesitate to contact me or Epicur.

Formal - April 20, 2016, 3:25 pm

What vpn you recommend thats cheap but actually good?

diabloII - April 20, 2016, 4:21 pm

How do you feel about tor or i2p?

Is running a vpn then i2p service on a linux OS not secure enough? What do you believe is the most ideal setup for anonymity (SOCKS5, VPS, VPN, tor, i2p, iceweasel, disabled JavaScript, parrot/tails, etc)

thanks for any suggestions you might have. i really look forward to hearing this!

Tokyo - April 20, 2016, 9:40 pm

(Apr 20, 2016 03:25 PM)iAntiKids Wrote: [\[CITE\]](#) What vpn you recommend thats cheap but actually good?

Mullvad. They're located in Sweden and accept Bitcoin, Cash, and Bank Wire. An alternative would be Torguard.

(Apr 20, 2016 04:21 PM)diabloII Wrote: [\[CITE\]](#) How do you feel about tor or i2p?

Tor and I2P are different in their own ways. Although I can't discuss dw content here, I2P is better for that. It all comes down to personal preference. That setup wouldn't be secure enough. Something I would do is Linux VPS > VM routed to TOR > VPN > SOCKS5 CHAIN > TOR. You could also use other people's wifi while connecting to vps. Burner is also recommended.

Epicur - May 5, 2016, 3:50 am

After some down time, this Helpdesk is active again! Ask whatever you need!

Epicur - May 17, 2016, 11:45 pm

This thread is still going on, don't hesitate to contact me or post below.

Prawnster - May 18, 2016, 4:30 pm

I have an email and I do not know how to get the address of the guy or any extra info, I tried already using this list of search engines

<https://hackforums.net/showthread.php?tid=5171262>

but cannot seem to get any information?

Any other sites?

Tokyo - May 18, 2016, 7:03 pm

(May 18, 2016 04:30 PM)MazI Wrote: [\[CITE\]](#) I have an email and I do not know how to get the address of the guy or any extra info, I tried already using this list of search engines

Have you tried searching through dbs or doing the 'forgot password' technique for his name? I'm naming a few, there are more you could do to get information off of the guy.

Tokyo - May 21, 2016, 6:51 pm

We are still accepting questions regarding pi or anonymity! Please post them here or pm any of us.

Zayzo - May 22, 2016, 4:36 pm

Anyone with any questions, lets get this active.

zilo - May 22, 2016, 11:21 pm

In your opinion, what is the best security setup?

The Boogeyman - May 23, 2016, 12:23 am

What is the best way to fight against DDoS attacks if you have a static IP?

Zayzo - May 23, 2016, 8:46 am

(May 22, 2016 11:21 PM)vekeni Wrote: [\[CITE\]](#) In your opinion, what is the best security setup?
<https://hackforums.net/showthread.php?tid=5232016>

Thread above written by me should be the best standard setup for everyone. You can increase security, by booting raspberry pi2 to tor as router.

(May 23, 2016 12:23 AM)The Boogeyman Wrote: [\[CITE\]](#) What is the best way to fight against DDoS attacks if you have a static IP? Check out my post above for security setup, once you get all that set up. I would recommend getting a new router/modem from your ISP which will assign you a new IP. Once you have this done, you can hide your new IP so it won't ever be leaked.

figox - May 23, 2016, 11:29 am

How important is google for doxing? What are some tips and tricks to use to filter results down?

Zayzo - May 23, 2016, 8:14 pm

(May 23, 2016 11:29 AM)figox Wrote: [\[CITE\]](#) How important is google for doxing? What are some tips and tricks to use to filter results down? Google is extremely helpful for doxing, and probably your best resource.

site:hackforums.net "figox" "email" "@gmail.com"

zilo - May 23, 2016, 9:51 pm

Is DuckDuckGo good? Is it worth the terrible search results in exchange not being tracked?

How do you feel about Privacy Badger?

How do you feel about HF blocking proxies, vpns and tor?

Zayzo - May 23, 2016, 9:56 pm

(May 23, 2016 09:51 PM)vekeni Wrote: [\[CITE\]](#) Is DuckDuckGo good? Is it worth the terrible search results in exchange not being tracked?

How do you feel about Privacy Badger?

How do you feel about HF blocking proxies, vpns and tor? The only two browsers I use are firefox (with a multitude of privacy plugins) and then Tor. I wouldn't bother with DuckDuckGo personally.

Not much experience, however seems like a straight-forward useful plugin.

This is a clearnet forum, and if your conducting blackhat activites with no protection your pretty stupid and deserve whats coming to you imo.

I think the policy is good personally, I wouldn't care either way. Doesn't affect me, I separate my activities for my own safety regardless if HF allowed or didn't allow proxies.

THC - May 23, 2016, 10:02 pm

What do you find is the best technique for acquiring SSNs?

Also, borkity boink doo.

Zayzo - May 23, 2016, 10:09 pm

(May 23, 2016 10:02 PM)M.D. Wrote: [\[CITE\]](#) What do you find is the best technique for acquiring SSNs?

Also, borkity boink doo. Grabbing SSN info isn't allowed to be discussed, ranges on the blackhat side. There's a easy way and a complicated way. If you don't know the easy way, you shouldn't be grabbing them at all.

zilo - May 23, 2016, 10:22 pm

(May 23, 2016 09:56 PM)Zayzo Wrote: [\[CITE\]](#) The only two browsers I use are firefox (with a multitude of privacy plugins) and then Tor. I wouldn't bother with DuckDuckGo personally.

You can try set up an webrtc stun script ip logger and find a way to get him to open the link, or you can try skype deob I don't have a link of Skype DEOB atm.

Epicur - May 28, 2016, 3:33 pm

(May 26, 2016 05:23 PM)OGSellin Wrote: [\[CITE\]](#) How can you find the real IP through someone using a VPN/Proxy? You should have to Social Engineer them into some website that exploits some Adobe Flash Player or Browser vulnerability that reveals their real IP, but in most of the cases is not

simple.

(May 26, 2016 05:23 PM)OGSellin Wrote: [\[CITE\]](#) How do get the address of someone whos house isnt in their name? Maybe you could dox their parents and check where they live. If not maybe through some database dump where he has put his personal information or through social engineer (you send him a message on skype from a new account saying you are giving something free, if he is interested, then you can ask him for his address (first stupid example I could think of)).

(May 26, 2016 05:23 PM)OGSellin Wrote: [\[CITE\]](#) If someone on this website who is harmful and has scammed you what can you do about it? By abiding to HF rules you can not threaten any HF members. You should be careful when trading, if you ever get scammed Hmu we will see what we can do about it.

You would have to elaborate on this. Doxing websites as in tools you could use to help you dox?

evolution™ - May 29, 2016, 7:12 pm

Hey guys, I was hoping you could PM me, I have some questions regarding anonymity and Linux. I am new to Linux (Kali), and want to begin website hacking. I need to be anonymous, but I am having a very difficult time finding anything about this on a Linux system. They are all setup for Windows.

Basically, my main question for you guys is, do you know of any good tutorials for Linux (kali) that will help me become anonymous while doing this?

Also, the whole thing about creating a separate identity confuses me a little bit. So, I know I have to make a new identity by using Fake Name Generator, but does that mean I should go online and delete everything that has to do with me personally? And when I do create an online identity, before I use the Internet for it, I need to make sure I delete cookies and all of that and make sure that I do not use the same IP address or connect the two in any ways. I just find this confusing, and was looking for something to help me with this.

?Astronaut? - May 30, 2016, 3:58 am

I found a couple of accounts on someone, also his IP. I just can't seem to get a name or email out of anything. Do you have any tips for getting his name?

SIM-1073426 - May 30, 2016, 10:00 am

If you have 20 people on a forum and you know that two of them are the same people, how would you use stylometric analysis to match them? Except the very basics e.g both have misspelled words or have a very unique way of using grammar.

BorkoSquad - May 30, 2016, 10:10 am

(May 30, 2016 03:58 AM)?t????t Wrote: [\[CITE\]](#) I found a couple of accounts on someone, also his IP. I just can't seem to get a name or email out of anything. Do you have any tips for getting his name?

Go on HavelbeenPWNed/Leakedsource and lookup his IP/Aliases, if you come up with anything

and see a database try and find someone with it who can look it up if you don't have it.

Use simple google searches on the aliases to get emails, applications for staff which can reveal age/skype and use ip2skype etc.

?Astronaut? - May 30, 2016, 10:48 am

I personally found them slow but they were good as most sites do not block them. The VPN I would personally recommend right now is CryptoStorm: <https://cryptostorm.is/> There is no sign up, all you do is buy with btc and they give you a token to use, simple setup! It is also very cheap at \$4 a month.

Like the user above stated, VIP72 (as far as I am aware) are both a Proxy & VPN provider.

I have one article, that'll help you choose which VPN provider to go with, read away.

As far as I am aware, there have been no factual and truthful articles that have claimed Private internet access keep logs (Proof backing up their statements). Nor have I ever heard of anyone who has been fucked over because PIA sold/gave logs to Government officials.

But since the user above me stated PIA keeps logs. I'd like to see substantial proof. But then again, I may be wrong - and they do keep logs.

In my opinion, PIA, TorGuard, CryptoStorm are probably the best VPNS when it comes to anonymity.

Enzio - June 2, 2016, 2:09 pm

PIA Conduct Conditions:

Spoiler [\(Click to View\)](#) You agree to comply with all applicable laws and regulations in connection with use of this service. You must also agree that you nor any other user that you have provided access to will not engage in any of the following activities:

Uploading, possessing, receiving, transporting, or distributing any copyrighted, trademark, or patented content which you do not own or lack written consent or a license from the copyright owner.

Accessing data, systems or networks including attempts to probe scan or test for vulnerabilities of a system or network or to breach security or authentication measures without written consent from the

owner of the system or network.

Accessing the service to violate any laws at the local, state and federal level in the United States of America or the country/territory in which you reside.

If you break their conduct conditions:

Spoiler ([Click to View](#)) Failure to comply with the present Terms of Service constitutes a material breach of the Agreement, and may result in one or more of these following actions:

Issuance of a warning;

Immediate, temporary, or permanent revocation of access to Privateinternetaccess.com with no refund;

Legal actions against you for reimbursement of any costs incurred via indemnity resulting from a breach;

Independent legal action by Privateinternetaccess.com as a result of a breach; or

Disclosure of such information to law enforcement authorities as deemed reasonably necessary.

I may also be wrong they don't keep logs but I still wouldn't trust them. The reason why is there are many articles you can find complaining about PIA's "no log" policy (whether there are no proof or not). Torguard and Cryptostorm is indeed the top choices.

Agonises - June 3, 2016, 1:41 am

I may also be wrong they don't keep logs but I still wouldn't trust them. The reason why is there are many articles you can find complaining about PIA's "no log" policy (whether there are no proof or not). Torguard and Cryptostorm is indeed the top choices.

Every VPN service has some sort of Terms of service, like TorGuard for example:

You agree to abide by all applicable federal, state and local laws and regulations in connection with the use of TorGuard.net's services. You also agree that you or any other user(s) provided with access to your account will NOT engage in the following:

- Transmitting, Sending or Receiving unsolicited and/or commercial emails, promotional material, "junk messages," "spam," "chain letters," or "pyramid schemes";
- Exploiting, Transmitting, possessing, producing, receiving, transporting, or distributing any illegal content, including but not limited to any sexually explicit depiction of children;
- Uploading, Transmitting, possessing, receiving, transporting, or distributing any copyrighted, trademark, or patented content which you do not own or lack written consent or a license from the copyright owner;
- Forging headers or otherwise manipulating e-mail identifiers in order to mask or mislead the origins of certain content;
- Interfering with the service to any other user, client, host or network which reduces the quality of service for other clients and users;
- Using the service to engage in Denial-of-service ("DOS") attacks to any third-parties or to TorGuard.net;
- Accessing data, systems or networks including attempts to probe scan or test for vulnerabilities of a system or network or to breach security or authentication measures without the express written consent from the owner of the system or network;
- Using this service to transmit any material (by email, uploading, posting, or otherwise) that threatens or encourages bodily harm, injury or destruction of property, defames one or more third parties, or promotes any act of cruelty to animals; or
- Accessing the service to violate any laws at the local, state and federal level in the United States of America or the country/territory in which you reside.

That doesn't mean they will pass over logs to government officials if you break their Terms of service. It's the same for a stresser, breaking their TOS will result in account clouser as oppose to them handing logs over to authorities if requested.

In that sense, PIA, TorGuard as far as I am aware, don't keep logs. Companies like PIA have strict Terms of service, yes. As they're needed and obliged to have TOS. It's all part of being a company that offer goods.

Also would like to point out:

" Disclosure of such information to law enforcement authorities as deemed reasonably necessary."

Since they don't log IPS (for now, lets say they don't), the only information they most PROBABLY log, is your Email address. This relates to the "Parallel Construction".

fieryblast - June 3, 2016, 4:29 am

i have a question about doxing

please don't see my posting status as newbie and dismiss me immediately.
i maybe new to doxing but i'm very interested and want to learn.

my question: more of a challenge i guess, because i want to know the limits of existing doxing methods.

case1:

All i have is a first name and age and face pictures and country of residence. is it even possible to trace this person.

case2:

first name, email (not personal email, more like a side email), not a good quality face pic, age, country and state of residence, kik messenger username and a very specific piece of (potential) information (Those who are serious in guiding me, PM me for this information)

please don't see my posting status as newbie and dismiss me immediately.
i maybe new to doxing but i'm very interested and want to learn.

my question: more of a challenge i guess, because i want to know the limits of existing doxing methods.

case1:

All i have is a first name and age and face pictures and country of residence. is it even possible to trace this person.

case2:

first name, email (not personal email, more like a side email), not a good quality face pic, age, country and state of residence, kik messenger username and a very specific piece of (potential) information (Those who are serious in guiding me, PM me for this information)case1:

Yes, ofc it is possible to dox that person. I would start by searching them on social media sites, and from there try to get their email.

Once you have their email you can do some sort of social engineering and send them a mail with a pic or something that when they click it you see their ip.

Quite an easy dox, tbh, always assuming, ofc, that the person uses social media sites and has a computer.

case2:

I guess if you have that information you almost have the completed dox ?

I'd do some social network searching with their name and their country of residence and once you have exactly who that person is you can try to social engineer him aswell.

I'd so some searches on LeakedSource or some web like that with their side email, maybe you can find some valuable information.

I hope I helped u, if you have any more questions don't hesitate to ask.

It's not a lot of information, now it depends on the country and the name but if I search on my own firstname and age on the whitepages belonging to my own country I have 1287 results. so seems like it's too little. However it's very possible you can do something with the email as it's possible to get the recovery email of some emails. Then you got his original email and can go from there.

You can use the face picture and do some reverse image search but they rarely get good hits, It depends on where you got the image and how good it is I suppose.

As for the Kik username, hoping it's not unique for only that account go ahead and do a username search for it on Google or <https://namechk.com>

Based on the information given so far I can guess it might be time-consuming finding the person. But for someone a little more experienced it's very possible.

a sincere thank you for this reply, Sir.

about case 2, i think you'll find the info in case 2 interesting. would you PM me to talk more about it?

very true about it being laborious.

also, i tried the 'forgot password' option on gmail to find the person's real email (the recovery email). only got first two letters though.

Epicur - June 3, 2016, 4:03 pm

If you have any inquiries just post them here.
I'm quite busy with exams lately.

fieryblast - June 3, 2016, 7:54 pm

Of course.

If all I have is a first name, won't searching on social networking sites be near impossible? There are 100s of profiles!

Moralitas - June 3, 2016, 8:08 pm

You're offering a service to "educate" others on anonymity, yet it took me a little less than an hour to identify all four of you. Esforzarse Más.
