Thread: [How do games disable inspect element?](#)

ModernMoney - April 21, 2016, 12:03 pm

How do sites like agar.io & slither.io disable the ability to right click inspect element?

EDIT:

Figured out how to do it, simply had to disable the context menu like so:

PHP Code

```
<?php
document.addEventListener('contextmenu', function(e) {
    e.preventDefault();
});
```

They don't ? I can inspect them. Try installing the FireBug extension for Chrome or Firefox. Then you can click this icon to inspect elements, it is widely used by web developers.

For some reason your post just pissed me the fuck off.

1. <http://imgtfy.com/?q=how+do+I+disable+inspect+element>

2. He's not acting like a cunt. All you have to do is install the firebug extension

<http://prntscr.com/av7enk>

One simple google search could have done the trick you pussy

You are the cunt here. He gave you the right answer. You can't disable Inspect Element. It would be useless to anyways.

What these sites do is capture right click events, and cancel them.

As the user above me said, all you had to do was just head to Google. And to make matters worse you're rude as fuck.

Lol what the fuck? Browsers will always be able to "Inspect Element" because they are responsible for rendering the HTML and JavaScript sent to you in the first place. You're essentially asking how you can use JavaScript to disable native functionality on a browser. You're wrong, and what's worse is that you're acting like a complete ass about it.

As I stated in my question, I wanted to disable accessing it by right click. I'll be sure to bold it next time!

And I think everybody will be sure to ignore your question next time. Nobody wants to help you if you're going to be a dick. End of conversation.

I misinterpreted what he was saying. I'm in the wrong here. rep--
