Thanks! This is for my new PC, my current pc is horrible. It has a GT 630, it's just a default HP Pavillion from 2012 ?? Nice hyperbeast signature btw!

Brenton - April 22, 2016, 8:20 am

Damn man, I been had this though.

Good cop. Amazing card.

Yeah for sure bro. I have a YT chan with 900 subs but can do nothing because this pc can not record anything but minecraft and even that is only at like 30 fps. I game a lot haha so yeah bro, this pc is for gaming :D

Make sure to lower Anti Aliasing, turn off vertical sync, and use Optifine to maximize your FPS! My game looks great and runs around 150-300fps!

haha bro, I no longer play minecraft, quit 3 years ago, this pc can run games just cant record them. I play csgo haha and dont worry brother I know my video settings ?

TheSuspect - April 22, 2016, 8:30 am

How did you manage to get it so low? Best I can find is like 950 AUD

Long story;

This dude listed it for \$950, I offered \$920 and he accepted it. Was a deal within itself. But, this eBay acc is new, and I hadnt brought anything yet, so eBay (wanting me to purchase something) sent me a coupon to take 10% off any purchase for one time only. I applied the coupon code and it dropped it from \$920 to \$840! :D

My current PC has a shit CPU, but my new, first time building, custom made PC will have an i7 4790k

Jingley - April 23, 2016, 2:21 am

Congrats dude! I have the same one :)

FranklinJ - April 23, 2016, 2:29 am

Congrats OP !!! I am thinking of buying it too , i must upgrade my GPU

ProtectNull™ - April 23, 2016, 2:35 am

Do you have enough PSU watts to power that beast?

Yeah man, should be getting a 650W PSU so should be good, if not will upgrade, this pc is made to last me a while! (hopefully!)

Well. My current CPU is a AMD A10-5700, and this is from a Pre-Built HP Pavilion, from 2012. I'm 13, and that was when I was 9 so obviously had no idea about specs. Now this PC is going to have:

CPU:
i7-4790K

GPU:
980 TI

RAM:
16 GB Vengeance Pro

Motherboard:
Yet to be chosen, either a Z97 or a different, better MSI board.

PSU:
650W supernova

Old PC:

Not really, as this wasn't from a shop on eBay but rather a seller, who had 2 for a work station PC but decided to go a different direction. Might if it was possible on the warranty but would have no idea on what to really do ?

Regulus - April 23, 2016, 2:48 am

This is my dream card. Wanted it for so long but never really afforded it haha :/

Nice! I got one a month ago. Really enjoying it!

Warning: Large Image!

Spoiler [\(Click to View\)](#)

It's hooked up to a 4k Tv so I had to scale everything up to see ?

Wouldn't be able to afford it! haha, plus this is just fine for the next 4 years of games :P

ott-hon - April 24, 2016, 3:27 am

should have waited for next generation that should arrive next 2 months, prices of these will drop like hell
