Thread: [Shouldn't HF have an HTTPS protocol?](#)

_____ - April 25, 2016, 2:31 am

It would be more safe then. I notice the address bar always remains HTTP.

v0dka - April 25, 2016, 2:36 am

this has been asked hundreds of times, do a search before posting.

Omniscient Wrote:

You can use it here if you want. However it breaks layout because the CDN serves non-ssl content so images, styles, and javascript won't load. In order for me to go SSL I'd have to serve all content which currently is not an option.

There is no serious security risk from non-SSL site usage. Never has even one account been stolen because of it.

backtrack-5 R3 - April 25, 2016, 3:40 am

I totally agree with you it should have, the other form where i'm user , actually there was such a thing!

Uppermost - April 25, 2016, 3:45 am

That's because this is HF and changes here take ages.

rezzex - April 25, 2016, 4:38 am

You can use the https:// for the Login then you are save, it's just a Forum everybody can read what you write.

BahNahNah - April 25, 2016, 4:40 am

It does. Its just the stylesheets that dont use it.

BooGod - April 25, 2016, 4:44 am

Do some home work researches!

Because HackForums has such a large userbase that people would be sniffing around houses trying to hijack an account that has no real-world value.

You don't seem to get it.

SSL is meant to be used for valuable information, such as Credit card, Full name, Address, and so on.

HackForums does not have any valuable information in regards to the purpose of SSL.

Read some information about SSL and you might understand why it has no use on HackForums.
