Remember all of our VPS packages dedicate resources to you and are not shared with others.

We take pride in the quality of our VPS and the fact that we DO NOT over sell :)

We hate over selling, Unlike other providers we dont provide you with "vRAM" which will slow you down.

We Dedicated the RAM to you, if you decide not to use it, it is still dedicated to you :)

The payment was very slow. Paying with bitcoin is slow, but I must've very unlucky.

Once the payment was finally confirmed, it didn't take long before everything was up and running!
The VPS is quick and responsive and I'm happy. Good price with the discount code too.

Thank you for your feedback.

The payment took about 30min to 1 hour due to the bitcoin system as you might understand. Our side takes less than 120 sec to set up after the payment.

so if the payment was with a service like paypal then set up would have been immediate or 120sec the most :)

"The VPS is quick and responsive and I'm happy. Good price with the discount code too."

Very glad you are happy with the VPS and our prices :)

Here is my review on LuxinHost's Windows VPS:

Before purchasing the VPS, I chatted with Daniel through the live chat support, and he did an amazing job at answering my questions. I always like to ask a lot of questions before purchasing a VPS due to the fact that I like to know what I am purchasing. He was very patient with my questions and answered with my questions with great detail.

The VPS performance is phenomenal. The performance is not slow (which I love), and you get great specs for a low price, which is a great deal in my eyes.

The internet speed is not bad either, you get what you are promised; which is a minimum of 200Mbps.

All in all, I would recommend this service to anyone that is looking for a great VPS for a low price. I plan on using LuxinHost for all my future VPS needs.

Looks very nice.

With shared hosting will I have root SSH access?

Can i run my php scripts and use a mysql db?

Any ddos protection?

of course with shared hosting you wont have any root SSH access as it is a shared hosting however jailed SSH access can be enabled if required.

as long as the PHP scripts do not violate our TOS then of course. MySQL DB is a standard on all of our packages.

We have 2 layers of strong DDOS protection.

dont order here,

they had an downtime for 1 week, with no communication afterwards they forced every customer to move from EU to US.

Which resulted into a high ping, they also dont want to repair it.

can also provide screenshots if someone want

We had no downtime, your server was and is un-managed which means if your team speak server is not working, it is your responsibility to fix it.

All of this is available in the ticket requests and chat logs you opened with us asking us to fix it for you which we did while it was not our responsibility to do so. In fact, we helped you fix your team speak server multiple times even though again this is NOT our responsibility since your server is unmanaged.

After we spent so much time going out of our way to assist you, it is very strange and upsetting to our staff to see you leave such a review.

Also as mentioned to you previously in the ticket, regardless of the fact that you charged back via PayPal (we can win the case since these are digital goods), we will gladly refund you just to make sure you walk away slightly happier.

Now again as mentioned to you in the ticket, if you would like we can go the extra mile regardless of your multiple chargebacks and reinstall OS in addition to installing a TeamSpeak server for you again.

Anyone can gladly try out our service and if you do not like it, I will personally refund you.

Pricing decrease for VPS, cheapest package is now \$6.99 and higher packages offer more resources for the same cost.

Are the VPSs truly unmetered? Is there any policy in place for Tor, specifically running relay/exit

nodes?
