Thread: [Babylon Connection Issues](#)

gilles - April 26, 2016, 9:51 am

Hi HF Members, ?

I've wanted to use Babylon long time ago but i had connection issues with it and i still do have i tested it on my self and it didnt work i asked my friend to open in VM and nothing happend

- I'm using FagDNS

- I'm using Babylon

- I'm using port 200

If any one could help me would be aweasome!

Kind Regards Gilles! ?

Adderall - April 26, 2016, 9:54 am

Are you sure port 200 is not used by another program.

What is actually not working is the server not listening to the port or is the client not connecting to the server while the server listens to the port.

Is your port forwarded?

Yes,

It works on KillerRAT

So you're using killerrrat and babylon on port 200, that will cause issues.

Just use a random port like 25859 for Babylon and try again

You obviously have forwarded the port to you, you have allowed your application through the firewall?

This will be your mistake sorry... just backtrace, take your time and find what you fckd.

If you get really stuck pm me and ill TV it for you

Armada - April 27, 2016, 7:24 am

Sounds like windows firewall blocking.

Try the local loopback test to verify.

7 - April 28, 2016, 11:41 am

Yeah he fixed it. Then started messaging around trying to get test installs. Sometimes guidance is not enough :D
