Thread: [NEW working DNS Server!/ FREE TUT](#)

Modern day Hippy - April 26, 2016, 4:33 pm

I just tried this right now on my Icloud locked Iphone 6 IOS 9.2

It has a lot of features and even a chat room

Hope this help's you guys as it did me ?

dude i tried this method with an iphone 6 plus, iphone 5c and iphone 6 (they all have 9.3.1) and it doesn't appear any kind of captive portal. Do you know if is possible to bypass with the jailbreak?

As stated in the video the only gen that is up to date with a full removal bypass is the Iphone4. Other methods are manually switching the hardware.

Are you sure you're putting the correct DNS server for your country? This worked no problem for me.
