Annoited - April 27, 2016, 3:33 pm

Get some logs so that people can see what's wrong. Here are the recommended programs from ProtectNull:

Download [Farbar Recovery Scan Tool](#) and save it to your Desktop.

Farbar Recovery Scanning ToolRight click to run as administrator (XP users click run after receipt of Windows Security Warning - Open File). When the tool opens click Yes to disclaimer.

Press Scan button.

It will produce a log called FRST.txt in the same directory the tool is run from.

Please copy and paste the log back here

The first time the tool is run it generates another log (Addition.txt - also located in the same directory as FRST.exe/FRST64.exe). Please also paste that along with the FRST.txt into your reply.

TDSSKillerPlease download [TDSSKiller](#) and save the file to your Desktop.

Right-Click TDSSKiller.exe and select Run as Administrator

Click Change parameters. Place a checkmark next to Detect TDLFS file system and Verify file digital signatures.

Click Start Scan. Do not use the computer during the scan.

If objects are found, change the action to skip.

Click Continue and close the window.

A log will be created and saved to the root directory (usually C:\). Paste the file contents to pastebin.com and post the link in your next reply.

ProtectNull™ - April 27, 2016, 6:48 pm

Please open notepad and copy paste the contents in the codebox below. (Do not include "Code:" tags)

Code start

CloseProcesses:

HKU\S-1-5-21-3702152037-2257045665-4266475196-1001\...\Run: [Clownfish] => C:\Program Files (x86)\Clownfish\Clownfish.exe [1368304 2016-03-28] (Bogdan Sharkov)

HKLM\SOFTWARE\Policies\Microsoft\Internet Explorer: Restriction <===== ATTENTION

HKU\S-1-5-21-3702152037-2257045665-4266475196-1001\Software\Microsoft\Internet Explorer\Main,Start Page = hxxp://www.aol.com/

System32\Tasks\{2DD6E656-EA28-47E2-9E6A-D9FF81A5CB4C} => Iexplore.exe

hxxp://ui.skype.com/ui/0/7.18.0.112/en/go/help.faq.installer?source=lightinstaller&LastError=1618

EmptyTemp:

Hosts:

Click File, Save As and enter fixlist.txt as the file name.

NOTE. It's important that both files, FRST/FRST64 and fixlist.txt are in the same location or the fix will not work.

NOTICE: This script was written specifically for this user, for use on that particular machine. Running this on another machine may cause damage to your operating system

Run FRST/FRST64 and press the Fix button just once and wait.

If for some reason the tool needs a restart, please make sure you let the system restart normally. After that let the tool complete its run.

When finished FRST will generate a log on the Desktop (Fixlog.txt). Please post it to your reply.

ESET Online Scanner

Download this here [ESET Online Scanner](#)

Turn off the real time scanner of any existing antivirus program while performing the online scan.

Tick the box next to YES, I accept the Terms of Use.

Click Start

Make sure that the option Remove found threats is unticked

Click on Advanced Settings and ensure these options are ticked

1) Scan for potentially unwanted applications

2) Scan for potentially unsafe applications

3) Enable Anti-Stealth Technology

Click Scan

Wait for the scan to finish

If any threats were found, click the 'List of found threats' , then click Export to text file....

Save it to your desktop, then please copy and paste that log to pastebin and paste the pastebin link to your next reply.

I?l ?z? ???? - April 28, 2016, 5:07 pm

Fixlog.txt: <http://pastebin.com/ddeDYg3R>

ESET Scanner log: <http://pastebin.com/959gG9PQ>

It deleted it self I guess for the ESET Scanner. It automaticly started scanning when I installed it so I just left it I thought it was supost to do that.

ProtectNull™ - April 28, 2016, 5:30 pm

Alright,

Download this here [AdwCleaner](#)

Double click on AdwCleaner.exe to run the tool.

Click on the Scan button.

When it's done you'll see: Pending: Please uncheck elements you don't want removed.

Now click on the Report button...a logfile (AdwCleaner[R0].txt) will open in Notepad for review.

Look over the log especially under Files/Folders for any program you want to save.

If there's a program you may want to save, just uncheck it from AdwCleaner.

If you're not sure, post the log for review in pastebin.com and paste link in next reply.

If you're ready to clean it all up, click the Clean button.

After rebooting, a logfile report (AdwCleaner[S0].txt) will open automatically.

Copy and paste the contents of that logfile in your next reply.

A copy of that logfile will also be saved in the C:\AdwCleaner folder.

What do you think is the cause of this when It slowed down yesterday?

Is your operating system drive HDD or SSD?

I'm not sure why it did randomly. And I have no clue if its HDD or SSD. It's just a laptop.

Type performance > choose Adjust the appearance and performance of Windows.

If the current setting is significantly less than the recommended, uncheck the Automatically manage paging file size for all drives box at the top of the same windows and then click on Custom size.

Enter the Recommended value in the Initial Size box, and a larger figure in the Maximum size box.

Click OK to save the new settings.

Alright, I'll give this a try and see if it gets better. Also gonna try updating my PC aswell and see if that'll help.
