Thread: [Crypto-Guru is needed for this challenge](#)

Corps3 - April 27, 2016, 2:49 pm

Dear all,

I am so lucky that I have joined HF, and found that people are very nice in here. I am looking for a "Guru" in crypto. Meaning the task is the following:

Encrypting Harddisk While In Sleep Mode

Is this possible, and if yes, how can I do that. Let's say I am using Whonix as operating system.

Let me know if you have some pointers ?

/Corpse

I fear you may not find the help you are looking for here. You may have better luck in the Cryptography, Encryption, and Decryption section, as I see you've already posted there. Good luck!

Thanks. One guy told me that I was better off posting here. So I guess I am just leaving these post here for the admin to take care of, since I don't know where to put them. ?
