Thread: [create batch file to file search](#)

missNasser - April 30, 2016, 7:25 pm

how would i make a batch file to do a file search?

vaxo - April 30, 2016, 7:27 pm

this looks like it is somewhere along the lines.

Code @echo OFF

```
for /f %%F in ('dir %2\%1 /s /b') do (  
    <nul (set /p msg=%%~nxF )  
    for /f %%G in ('dir %3\%%~nxF /s /b') do (  
        if exist %%G (  
            @echo found at %%G  
        )  
    )  
)
```

%1 is the user provided file mask.

%2 is the user provided directory to search first.

%3 is the user provided directory to search second.

Call from the command line to generate a report:

FindAll *.dll d:\dir1 d:\dir2 > dll_report.txt 2

@vaxo Hi i have just tested it and its just a blank screenand i can type anything or do anything with it.

Hackoo - April 30, 2016, 7:37 pm

Hi ?

You can try something like that :

PHP Code

```
<?php
```

```
@echo off
```

```
Title Searching files by Hackoo 2016
```

```
Mode con cols=90 lines=3
```

```
cls & color 9E
```

```
echo(
```

```
Set /p "Location=Enter the folder location where do you want to serach> "
```

```
cls & echo(
```

```
echo You chose this location "%Location%"
```

```
echo(
```

```
Set /p "FileName=Enter the file name to looking for> "  
Set Tmp=Tmp.txt  
Set SearchResult=SearchResult.txt  
echo( & cls  
echo( & echo    Please Wait for moment .... Searching for "%FileName%" on "%Location%"  
where /r "%Location%" "%FileName%" > %Tmp%  
Cmd /U /C Type %Tmp% > %SearchResult%  
Del %Tmp%  
Start %SearchResult%
```

Hi hackoo can you make it list the file instead of making it write a txt like i would like it to say all files found called "anything" then a list of them and would you view delete the files and then have an option of a few of them or all files under the name "anything"

i am trying to make a file search and delete tool

I would like to make a file search and delete tool and i would like the location to be everywhere like search the whole computer

Also, creating over 3 threads about the same question is frowned upon.

Well, yes, it's possible, but please try to do that little thing by yourself.
