Thread: [\[Tut\]Control a pc using Twitter\(Phone/PC\)\[Tut\]](#)

pbhuvanesh - May 1, 2016, 1:55 pm

Hey HF

You can control a pc using Twitter.

1.Download - Tweet My Pc - [https //tweetmypc.codeplex com/releases/view/52175](https://tweetmypc.codeplex.com/releases/view/52175)

2.Install it

3.Login to your twitter account

4.Allow app login from twitter

5.Now use your twitter app from phone and just tweet shutdown or standby or any command you want - Ref - [http //tweetmypc.codeplex com/wikipage?title=Commands](http://tweetmypc.codeplex.com/wikipage?title=Commands)

6.You can also install it on your friends pc have fun ??

Note:Antivirus will not detect this as virus since it is not malicious ?

Nice tutorial buddy, can't really find it useful though, if I've an access to someone's PC I'd rather temporary disable his AV and install a RAT or w/e

AlirezaVF - May 2, 2016, 11:53 am

tnx for share

lets try it

You could do "kill <process id>" and then "download <URL>"
That's one way of using this

EDIT:

Use "getprocesslist" to get process id of a AV or smth
