Thread: [\[Tutorial\] How to bypass Google 2auth](#)

Sift - May 3, 2016, 5:35 am

Can't be sure if this works but it did for me.

What you need?

Target phone number.

Proxies/Vpn from different countries.

1st. Login into ithe from different countries.

2. When confirm the recovery phone number pops up.

Write his phone number then you should be in.

?Citizen Z / Napalm - May 3, 2016, 5:41 am

Vouch for analyse's method, his stuff works

Spl0ite - May 3, 2016, 5:43 am

Yea @analyse I have tried that and it does work, Its very important to use a VPN or you can use TOR.

HiddenEyE - May 3, 2016, 5:44 am

i don't really think this works cause gmail does not show the complete phone number.

please explain how this method works

Sift - May 3, 2016, 5:57 am

Thats why the tutorial says "Things you need: Target phone number." lol

And OP, this is hella interesting, surely will test it soon and report back :)

spooky hacker - May 3, 2016, 11:05 am

Doesn't it then ask to send a text or call then #?

Sift - May 5, 2016, 6:10 am

(May 3, 2016 11:05 AM)C?sh Wrote: [\[CITE\]](#) Doesn't it then ask to send a text or call then #?

Not when it logs in from different countries and lps it asks for phone number.

SkinX - May 5, 2016, 6:15 am

Nice find, thanks for this. I'll try this out and hopefully it's not been patched yet.

N3xuz - May 5, 2016, 8:51 am

Very interesting. This doesn't work when trying to doing a password reset, correct?

mlux81 - May 5, 2016, 10:09 pm

If this really works it could be very interesting, i'll try this.

Thanks

Glubz - May 7, 2016, 3:00 am

This isn't 2 step verification. This is basic identification verification when you sign in from an unrecognized IP.

Sift - May 7, 2016, 9:51 am

If they have 2auth this works sometimes lmao.

Enigmaz - May 9, 2016, 11:36 am

Well why not try something else?

Since you know the phone number why not get the city were the person lives and from there get a socks5 proxy of the same city as the victim.

Because doing all of this I doubt it would work.
