Thread: [How can I check if I'm being ratted?](#)

colja123 - May 4, 2016, 9:01 am

For a bunch of hours now, my passwords from youtube accounts always change... I'm not changing them... I don't even get the warning that they got changed - an email! How can I find out? I tried looking for something in CMD, but there were no signs... Anything I can do?

Lana Del Rey - May 4, 2016, 11:01 am

lol what did you look at in CMD?

Check your registry, startup, processes and or just do a full format and change your passwords also at a 2factor authorization feature to any accounts.

Hello colja123

Please read through the points below before we start. Read my instructions thoroughly, and carry out each step in the specified order.

Do not run any tools or take any steps other than those I provide for you. Independent efforts may make matters worse, and will affect my ability in providing the best set of instructions for you.

Please backup important files before proceeding with my instructions. Malware removal can be unpredictable at times.

If you come across any issues, please stop and inform me of the issue in detail. Do not hesitate to ask before proceeding.

I will notify you when I believe your computer is free of malware. The absence of symptoms does not necessarily mean that your computer is clean.

If I do not reply within 48 hours, write a PM. I might have just overlooked your thread. Keep in mind that we likely live in different time zones.

I might abandon your thread if you do not reply within five days. I take only as many logs as I can handle.

Step 1: Farbar Recovery Scan Tool (FRST) ScanPlease download [Farbar Recovery Scan Tool \(x32\)](#) or [Farbar Recovery Scan Tool \(x64\)](#) and save the file to your Desktop.

Note: Download and run the version compatible with your system (32 or 64-bit). Download both if you're unsure; only one will run.

Right-Click FRST.exe or FRST64.exe and select Run as Administrator

Click Yes to the disclaimer.

Ensure the Addition.txt box is checked.

Click the Scan button and let the program run.

Upon completion, click OK, then OK on the Addition.txt pop up screen.

Two logs (FRST.txt & Addition.txt) will now be open on your Desktop. Copy the contents of both logs and paste them to [pastebin.com](#). Post the link here.

Step 2: aswMBRPlease download [aswMBR](#) and save the file to your Desktop.

Temporarily disable your anti-virus software. For instructions, please refer to the following [link](#).

Right-Click aswMBR.exe and select Run as administrator to run the program.

Click Yes when prompted to download avast! virus definitions. Wait until AVAST engine defs: ### appears.

If you are prompted to enable the use of "Virtualization Technology", click Yes.

Click the AV Scan: drop down box and click C:\.

Click Scan.

Upon completion, you will see Scan finished successfully. Click Save log. Save the log to your Desktop.

Re-enable your anti-virus software.

Copy the contents of the log to [pastebin.com](#) and paste the link in your next reply.

Note: Do NOT click Fix or FixMBR.

Note: A file (MBR.dat) will be created on your Desktop. Do NOT click or delete it.
